Pioneer

Service Manual

KRP-600P

PLASMA DISPLAY
KRP-600P

THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Type	Power Requirement	Remarks
KRP-600P	WYSIXK5	AC 220 V to 240 V	
KRP-600P	WYS5	AC 220 V to 240 V	
KRP-600P	WA5	AC 220 V to 240 V	

For details, refer to "Important Check Points for good servicing".

SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.
WARNING
This product contains certain electrical parts contain chemicals which are known to the State of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE
(FOR CANADIAN MODEL ONLY)
Fuse symbols ▪━━┥ (fast operating fuse) and/or ▪━━┥ (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE
(POUR MODÈLE CANADIEN SEULEMENT)
Les symboles de fusible ▪━━┥ (fusible de type rapide) et/ou ▪━━┥ (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.
The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.

2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.

3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.

4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.

5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.

6. Perform the following precautions against unwanted radiation and rise in internal temperature.
 • Always return the internal wiring to the original styling.
 • Attach parts (Gascket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.

7. Perform the following precautions for the PDP panel.
 • When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 • Make sure that the panel vent does not break. (Check that the cover is attached.)
 • Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.

8. Pay attention to the following.
 • Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of 4 MΩ.

The below 4 MΩ resistor value indicate an abnormality which require corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 1 mA.
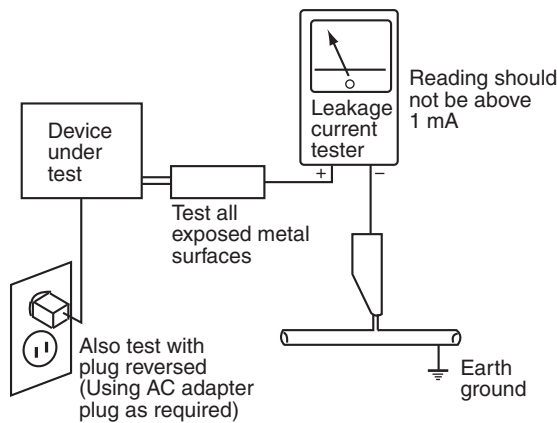

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a ⚠ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which dose not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

KRP-600P

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol.
Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris.
Soldering should be finished with the proper quantity. (Refer to the example)

④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs.
In addition, be sure that there are no pinched wires, etc.

⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages.
If you find a damaged power cord, please exchange it with a suitable one.

⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries.
Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification.
Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance.
Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

CONTENTS

1. SERVICE PRECAUTIONS
1.1 NOTES ON SOLDERING

A

- For environmental protection, lead-free solder is used on the printed circuit boards mounted in this unit.
  Be sure to use lead-free solder and a soldering iron that can meet specifications for use with lead-free solders for repairs accompanied by reworking of soldering.

- Compared with conventional eutectic solders, lead-free solders have higher melting points, by approximately 40 ºC.
  Therefore, for lead-free soldering, the tip temperature of a soldering iron must be set to around 373 ºC in general, although the temperature depends on the heat capacity of the PC board on which reworking is required and the weight of the tip of the soldering iron.

  Do NOT use a soldering iron whose tip temperature cannot be controlled.

B

Compared with eutectic solders, lead-free solders have higher bond strengths but slower wetting times and higher melting temperatures (hard to melt/easy to harden).

The following lead-free solders are available as service parts:
- Parts numbers of lead-free solder:
  GYP1006 1.0 in dia.
  GYP1007 0.6 in dia.
  GYP1008 0.3 in dia.

C

1.2 NOTES SPECIFIC TO THIS PRODUCT

D

- In same cases, there are silicon sheets on back side of POWER SUPPLY Unit, X DRIVE Assy and Y DRIVE Assy due to heat release of these boards to panel chassis. When replacing these boards, check backside of them and if silicon sheets are on there, surely put these silicon sheets again to the original location of them.

E

F

1.3 CHARGED SECTION AND HIGH VOLTAGE GENERATING POINT

■ Charged Section

The places where the commercial AC power is used without passing through the power supply transformer.

If the places are touched, there is a risk of electric shock. In addition, the measuring equipment can be damaged if it is connected to the GND of the charged section and the GND of the non-charged section while connecting the set directly to the commercial AC power supply. Therefore, be sure to connect the set via an insulated transformer and supply the current.

1. Power Cord
2. AC Inlet
3. Power Switch
4. Fuse (In the POWER SUPPLY Unit)
5. STB Transformer and Converter Transformer
   (In the POWER SUPPLY Unit)
6. Other primary side of the POWER SUPPLY Unit

■ High Voltage Generating Point

The places where voltage is 100 V or more except for the charged places described above. If the places are touched, there is a risk of electric shock.

The VSUS voltage remains for several minutes after the power to the unit is turned off. These places must not be touched until about 10 minutes after the power is turned off, or it is confirmed with a tester that there is no residual VSUS voltage.

If the procedures described in "5.6 [1] PANEL DRIVE-POWER ON/OFF FUNCTION" are performed before the power is turned off, the voltage will be discharged in about 30 seconds.

60F X DRIVE Assy	(210 V)
60F Y DRIVE Assy	(−280 V to 420 V)
60F SCAN A Assy	(−280 V to 420 V)
60F SCAN B Assy	(−280 V to 420 V)
60F SCAN C Assy	(−280 V to 420 V)
60F SCAN D Assy	(−280 V to 420 V)

▨ : Part is Charged Section.

▢ : Part is the High Voltage Generating Points other than the Charged Section.
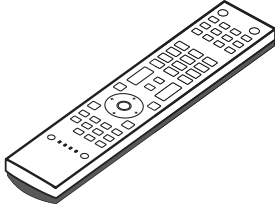

Fig. High Voltage Generating Point (Rear view)

■ Remote Control Unit (for WYSIXK5 and WYS5 types)

This section describes the functions of the buttons available when the TV mode has been selected by using the **SELECT** button.
1 ⏻**TV :** Turns on the power to the flat screen TV or places it into the standby mode.

2 **INPUT:** Selects an input source of the flat screen TV. ("INPUT 1", "INPUT 2", "INPUT 3", "INPUT 4", "INPUT 5")

3 ⬜**:** Switches the screen mode among 2-screen, picture-in-picture, and single-screen.

4 **PC:** Selects the PC terminal as an input source.

5 ⬅➡**:** Switches between the two screens when in the 2-screen or picture-in-picture mode.

6 **0 to 9:** TV/External input mode: Selects a channel.
Teletext mode: Selects a page.
Turns the power on when the STANDBY indicator lights red.

7 **EPG:** Displays the Electronic Programme Guide in DTV/SAT (Satellite) input mode.

8 **P+/P−:** TV/External input mode: Selects a channel.
➡/⬅**:** Teletext mode: Selects a page.

9 ✕ **EXIT:** Returns to the normal screen in one step.

10 ⬆/⬇/⬅/➡**:** Selects a desired item on the setting screen.
ENTER: Executes a command.

11 ⌂ **HOME MENU:** Displays the HOME MENU screen.

12 **Colour (RED/GREEN/YELLOW/BLUE):**
Controls a BD player for HDMI Control functions only.

13 ⬜**:** Jumps to Teletext subtitle page.
Turns subtitle on and off in DTV input mode depending on the broadcast.

14 **?:** Displays hidden characters.

15 **I−II:** Sets the sound multiplex mode.

16 ⬜**:** TV/External input mode: Freezes a frame from a moving image. Press again to cancel the function.
⬜ **:** Teletext mode: Stops updating Teletext pages. Press again to release the hold mode.

17 **TV, STB, DVD/DVR, VCR:** These indicators show the current selection and status when you control other connected equipment, using the supplied remote control unit.

18 ⊙**:** Lights up buttons.
Lights turn off if no operations are performed within five seconds. This is used for remote control use in dark locations.

19 (i+) 🕘 **INFO:** Displays the channel information.
Displays the banner information.

20 **HMG (Home Media Gallery):** Displays the Home Media Gallery screen.

21 **HDMI CTRL:** Displays the HDMI Control menu.

22 ⬜**:** Moves the location of the small screen when in the picture-in-picture mode.

23 **TV/DTV/SAT:** Switches the mode among TV, DTV and SAT.

24 **CH RETURN:** Returns to the previous channel.

25 ◁ +/◁ −: Sets the volume.

26 ⬜**:** Mutes the sound.

27 🔧 **TOOLS:** Displays the TOOLS Menu.

28 ↩ **RETURN:** Restores the previous menu screen.

29 ⬜**:** Selects the Teletext mode (all TV image, all TEXT image, TV/TEXT image).

30 ⬜**:** Displays an Index page for the CEEFAX/FLOF format.
Displays a TOP Over View page for the TOP format.

31 ⬜**:** Selects the screen size.

32 **SELECT:** Switches the selection among TV, STB, DVD/DVR, and VCR, so that you can control other connected equipment, using the supplied remote control unit.

✎ **Note**

• When using the remote control unit, point it at the display panel.

KRP-600P

■ Remote Control Unit (for WA5 type)

This section describes the functions of the buttons available when the TV mode has been selected by using the **SELECT** button.
1 ⏻: Turns on the power to the flat screen TV or places it into the standby mode.

2 **INPUT:** Selects an input source ("INPUT 1", "INPUT 2", "INPUT 3", "INPUT 4", "INPUT 5", "INPUT 6" or "PC")

3 **0 to 9:** TV/External input mode: Selects a channel.
Turns the power on when the STANDBY indicator lights red.

4 **CH RETURN:** Returns to the previously selected channel.

5 **P+/P–:** TV/External input mode: Selects a channel.

6 **HDMI CONTROL:** Displays the HDMI Control menu.

7 **↑/↓/←/→:** Selects a desired item on the setting screen.

ENTER: Executes a command.

8 **HOME MENU:** TV/External Input mode: Displays the HOME MENU screen.

9 **●/Ⅱ/■:** Used when operating the Home Gallery function.

10 **AV SELECTION:** Selects audio and video settings. (AV source: OPTIMUM, STANDARD, DYNAMIC, MOVIE, GAME, SPORT, USER. PC source: STANDARD, USER.)

11 **Ⅰ–Ⅱ:** Sets the sound multiplex mode.

12 ▯: Press to select 2-screen, picture in picture or single screen mode.

13 **TV, STB, DVD/DVR, VCR:** These indicators show the current selection and status when you control other connected equipment, using the supplied remote control unit.

14 **–/––:** Executes a channel selection.

15 ⊿ +/⊿ –: Sets the volume.

16 🔇: Mutes the sound.

17 🛈 INFO: TV/External input mode: Displays the channel information.

18 ↩ **RETURN:** Restores the previous menu screen.

19 ▯: TV/External input mode: Freezes a frame from a moving image. Press again to cancel the function.

20 ▯: TV/External input mode: Selects the screen size.

21 ▯: Moves the position of the sub screen when in picture in picture mode.

22 ▯: Swaps the main and sub screens when in picture in picture or 2-screen mode.

23 **SELECT:** Switches the selection among TV, STB, DVD/DVR, and VCR, so that you can control other connected equipment, using the supplied remote control unit.

📝 **Note**

• When using the remote control unit, point it at the display.

3. BASIC ITEMS FOR SERVICE
3.1 CHECK POINTS AFTER SERVICING

Items to be checked after repair (PDP)

To ensure the quality of the product after repair, check the recommended items shown below:

No.	Procedures	Item to be checked
1	Check if all the symptoms pointed out by the customer have been addressed.	The symptoms in question must not be reproduced.
2	Connect the peripheral equipment.	Connect all external peripheral equipment as originally connected and check if the connections are correct.
3	Check the video and audio.	Tune in to the stations that the customer would normally receive and check if video and audio are normal.
4	Check the buttons and controls.	Use the buttons and controls on the remote control unit and main unit and check if they operate properly.
5	Check the cabinet.	Check for any scratches or dirt that have been made or attached on the cabinet after receiving the product for repair.

See the table below for the items to be checked regarding video and audio:

Item to be checked regarding video	Item to be checked regarding audio
Block noise	Distortion
Horizontal noise	Noise
Dot noise	Volume too low
Disturbed image (video jumpiness)	Volume too high
Too dark	Volume fluctuating
Too bright	Sound interrupted
Mottled color	

Cleaning

Name	Part No.	Remarks
Cleaning paper	GED-008	Used to fan cleaning. Refer to "9.6 CHASSIS SECTION (1/2)".

KRP-600P

3.2 QUICK REFERENCE

Quick Reference upon Service Visit ①
Notes, PD/SD diagnosis, and methods for various settings

Notes when visiting for service

1. Notes when disassembling/reassembling

① **Rear case**
When reassembling the rear case, the screws must be tightened in a specific order. Be careful not to tighten them in the wrong order forcibly. For details, see "Rear Case" in "7. DISASSEMBLY".

② **Attaching screws for the HDMI and system cable terminals**
When attaching the HDMI and system cable terminals after replacing the Assembly, secure the terminals manually with a screwdriver, but not with an electric screwdriver.
If you tighten the screws too tightly with an electric screwdriver, the screw heads may be damaged, in which case the screws cannot be untightened/tightened any more.

2. On parts replacement

① **How to discharge before replacing the Assys**
A charge of significant voltage remains in the Plasma Panel even after the power is turned off. Safely discharge the panel before replacement of parts, in either manner indicated below:
A: Let the panel sit at least for 3 minutes after the power is turned off.
B: Turn the Large Signal System off before the power is turned off then, after 1 minute, turn the power off.
For details, see "5.6 [1] PANEL DRIVE-POWER ON/OFF FUNCTION".

② **On the settings after replacement of the Assys**
Some boards need settings made after replacement of the Assys. For details, see "8. EACH SETTING AND ADJUSTMENT".

3. On various settings

① **Setting in Factory mode**
After a Mask indication into the panel is performed, be sure to set the Mask setting to "OFF" then exit Factory mode.

	9	Display Port Tx
13	1	RST2
	2	RST4

Other SD main categories have subcategories. For details, see 5.4[2].

How to locate several items on the Factory menu

{ } : Item on the Factory menu
[ ] : Key on the remote control unit
" " : Screen indication

1. Confirmation of accumulated power-on time and power-on count
Select {INFORMATION} then {HOUR METER}.
(After entering Factory mode, press [↓] four times.)

2. Confirmation of the Power-down and Shutdown histories

① **Panel system**
PD: Select {PANEL FACTORY} then {POWER DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] two times.)
SD: Select {PANEL FACTORY} then {SHUT DOWN}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] three times.)

② **MR section**
Select {INFORMATION} then {MAIN NG}.
(After entering Factory mode, press [↓] two times.)

③ **Panel main section**
Select {PANEL MAIN FACTORY} then {PM NG INFO}.
After entering Factory mode, press [MUTING] twice, then press [ENTER/SET].

3. How to display the Mask indication

① **Mask indication in the panel side**
1. Select {PANEL FACTORY} then {RASTER MASK SETUP}.
(After entering Factory mode, press [MUTING] once, press [ENTER/SET], then press [↓] 8 times.)
2. Press [ENTER/SET], then select a Mask indication, using [↑] or [↓].

Adjustments and Settings after replacement of the Assys (Procedures in Factory mode)

1. DIGITAL Assy (Panel): Transfer of backup data
① Select {PANEL FACTORY}, {ETC}, then {BACKUP DATA}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [↓] seven times, then press [ENTER/SET].)
② Select {TRANSFER}, using [➡], then hold [ENTER/SET] pressed for at least 5 seconds.
③ After transfer of backup data is completed, {ETC} is automatically selected, and the LED on the front panel returns to normal lighting.

2. MAIN BLOCK Assy (MR), MAIN Assy (Panel): Execution of FINAL SETUP.
① Select {INITIALIZE} then {FINAL SETUP}, then press [ENTER/SET]. (After entering Factory mode, press [MUTING] three times, then press [↓] four times.)
② Select "YES", using [➡]. Then hold [ENTER/SET] pressed for at least 5 seconds.
③ After "FINAL SETUP IS COMPLETE" is displayed on the screen, turn the POWER switch of the main unit off.

3. POWER SUPPLY Unit (Panel): Clearance of the accumulated power-on count and maximum temperature value
① Select {PANEL FACTORY}, {ETC}, then {P COUNT INFO}. (After entering Factory mode, press [MUTING] once, press [ENTER/SET], press [↓] seven times, press [ENTER/SET], then press [↓] six times.)
② Press [➡] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected. Clear the maximum temperature value (MAX TEMP) in the same manner.

4. Other Assys (panel): Clearance of the maximum temperature value
① Select {PANEL FACTORY}, {ETC}, then {MAX TEMP}. (After entering Factory mode, press [MUTING] once, press [ENTER], press [↓] seven times, press [ENTER/SET], then press [↓] seven times.)
② Press [➡] to select "CLEAR". Hold [ENTER/SET] pressed for at least 5 seconds. After clearance is completed, "ETC" is automatically selected.

Structure of Layers in Panel Factory Mode 1

1. PANEL INFORMATION   Version indication of the panel
2. PANEL WORKS   Indications of the accumulated power-on time and power-on count of the panel
3. POWER DOWN   Indication of the Power-down history
4. SHUT DOWN   Indication of the Shutdown history
5. PANEL-1 ADJ (+)
   1. VOL SUS
   2. VOL OFFSET
   • • • • •   — Settings required after replacement of the panel

   10. RESET1ST_KSB
   • • • • •   — Items for factory use

   25. SUS FREQ   — For AM noise prevention (Depending on the mode, brightness of the screen changes.)
       For confirmation of the result of the setting change, the unit must be turned off then back on again.

6. PANEL-2 ADJ (+)
   1. R-HIGH
   2. G-HIGH
   • • • • •   — For the WB adjustment of the panel and ABL
   6. B-LOW   adjustment.
   7. ABL   A setting table is available for each signal frequency.

7. PANEL FUNCTION (+)
   1. R-LEVEL
   • • • • •   — Items for factory use

Structure of Layers in Panel Factory Mode 2

8. ETC (+)
   1. BACKUP DATA   — For transferring backup data (after replacement of the DIGITAL Assy)
   2. DIGITAL EEPROM   — Change the adjustment status of the DIGITAL Assy.
   3. PD INFO.
   4. SD INFO.
   5. HR-MTR INFO.   — For clearance of data for the corresponding items. The clearing method is the same: Select "CLEAR", then hold [ENTER/SET] pressed for at least 5 seconds.
   6. PM/B1-B5
   7. P COUNT INFO.
   8. MAX TEMP.
   9. MIRROR   Switch the Mirror display mode.
   10. CLS   Switch the function when checking the color sensor level.

9. RASTER MASK SETUP (+)
   1. MASK OFF   For use while the Raster Mask is displayed.
   2. RST MASK 01   — Use [↑] or [↓] to select the type of mask.
   • • • • •   Use [➡] or [⬅] to select the sequence.

10. PATTERN MASK SETUP (+)
   1. MASK OFF   For use while the Pattern Mask is displayed.
   2. PTN MASK 01   — Use [↑] or [↓] to select the type of mask.
   • • • • •   Use [➡] or [⬅] to select the sequence.

11. COMBI MASK SETUP (+)
   1. MASK OFF   For use while the Combination Mask is displayed.
   2. CMB MASK 01   — Use [↑] or [↓] to select the type of mask.
   • • • • •   Use [➡] or [⬅] to select the sequence.

3.3 PCB LOCATIONS

Note: The wiring shown in the photo is different from the actual wiring, because the product in the photo is a prototype.
Upon servicing, be sure to restore the original wiring of the unit after repair work.

5. DIAGNOSIS
5.1 POWER SUPPLY OPERATION

[1] LED DISPLAY INFORMATION

■ LED Pattern

Status	LED Display Pattern		Remarks
AC-OFF /Main PowerOFF	Blue / Red		
Standby	Blue / Red		
Power ON	Blue / Red		
Abnormality in system connection	Blue 1000ms / Red 1000ms		
Power down	Blue: Once, Twice, n times, 2.5s, Once / Red 500ms		*1
Shutdown	Blue 500ms / Red: Once, Twice, n times, 2.5s, Once		*2
No digital adjustment data copied for backup	Blue 200ms / Red		
During download (panel main)	Blue 100ms / Red 100ms ... 300ms		
During download (excepting panel main)	Blue 100ms / Red 100ms		*3

*1: This LED only flashes when power-down is generated in the display unit.
When power-down is generated in the MR, the LED on the MR flashes.

*2: This LED only flashes when shutdown is generated in the display unit.
When shutdown is generated in the MR, the LED on the MR flashes.

*3: These LEDs only flash during rewriting of software in the display unit.
During rewriting of software in the MR, the LEDs on the MR flash.

KRP-600P

[2] POWER ON SEQUENCE
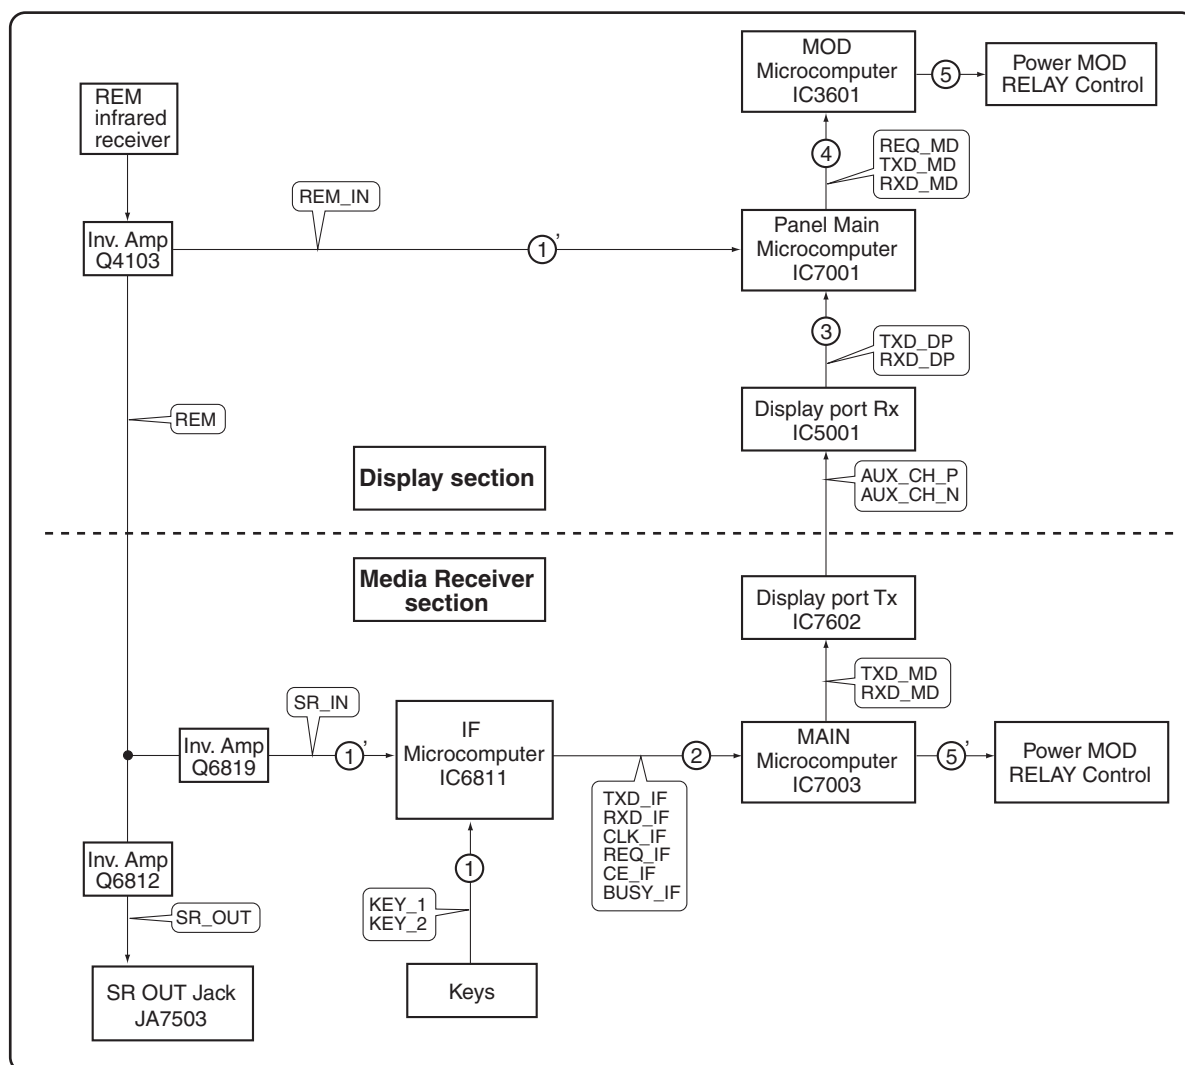

① : The KEY signal is input to the IF microcomputer.

①' : The remote control signal is input to the IF microcomputer and Panel main microcomputer.

② : The IF microcomputer sends the operation data of the remote control unit key to the main microcomputer.

③ : The main microcomputer issues a startup command (PON) to the panel main microcomputer through DP Tx and DP Rx.

④ : The panel main microcomputer issues a startup command (PON) to the MOD microcomputer.

⑤ : The MOD microcomputer controls a MOD relay of the POWER SUPPLY Unit (Display section), then the power is turned on.

⑤' : The main microcomputer controls a MOD relay of the POWER SUPPLY Unit (Media Receiver section), then the power is turned on.

[3] DETAILS OF POWER ON SEQUENCE

AC-OFF

(MR) Output port setting

IF: ACTIVE	OFF
MR Main: RELAY2	OFF
MR Main: PSW1	OFF

(MR) Input port state

MR Main: RST4	OFF
MR Main: RST2	OFF
MR Main: PD_TRG	OFF

(MR) Operation outline

All devices are not electrified.

(Panel) Output port setting

Panel Main: MAIN_PWR_CTL	OFF
Panel Main: PWR_CTL_MD	OFF
Panel Main: CLS_CTL	OFF
DP Rx: HPD	OFF
Module: RELAY1 / KDD	OFF
Module: DRF_B	OFF

(Panel) Input port state

Main: DC_IN	OFF
Module: RST2	OFF
Module: PS_PD/PD_TRG_B	OFF

(Panel) Operation outline

All devices are not electrified.

Panel Main Power OFF

(MR) Output port setting

IF: ACTIVE	OFF
MR Main: RELAY2	OFF
MR Main: PSW1	OFF

(MR) Input port state

MR Main: RST4	OFF
MR Main: RST2	OFF
MR Main: PD_TRG	OFF

(MR) Operation outline

The unit will enter either Passive Standby, Active Standby, or Functional Standby mode, according to the circumstance. (The figure shows Passive Standby mode as an example.)

(Panel) Output port setting

Panel Main: MAIN_PWR_CTL	OFF
Panel Main: PWR_CTL_MD	OFF
Panel Main: CLS_CTL	OFF
DP Rx: HPD	OFF
Module: RELAY1 / KDD	OFF
Module: DRF_B	OFF

(Panel) Input port state

Main: DC_IN	OFF
Module: RST2	OFF
Module: PS_PD/PD_TRG_B	OFF

(Panel) Operation outline

Standby power is supplied from the Power Assy, but power to each device is interrupted.

KRP-600P

37

Passive Standby

(MR) Output port setting

IF: ACTIVE	OFF
MR Main: RELAY2	OFF
MR Main: PSW1	OFF

(MR) Input port state

MR Main: RST4	OFF
MR Main: RST2	OFF
MR Main: PD_TRG	OFF

(MR) Operation outline

Only the periphery of the IF microcomputer are operated.

(Panel) Output port setting

Panel Main: MAIN_PWR_CTL	ON
Panel Main: PWR_CTL_MD	OFF
Panel Main: CLS_CTL	OFF
DP Rx: HPD	OFF
Module: RELAY1 / KDD	OFF
Module: DRF_B	OFF

(Panel) Input port state

Main: DC_IN	OFF
Module: RST2	OFF
Module: PS_PD/PD_TRG_B	OFF

(Panel) Operation outline

Only the periphery of the Panel main microcomputer and IR are operated.
In this time, panel main microcomputer is the sleep mode.

Active Standby

System Cable

ON ——→ OFF ·····▶

(MR) Output port setting

IF: ACTIVE	ON
MR Main: RELAY2	OFF
MR Main: PSW1	OFF

(MR) Input port state

MR Main: RST4	OFF
MR Main: RST2	OFF
MR Main: PD_TRG	OFF

(MR) Operation outline

Periphery of the IF and MR main microcomputers and DP Tx are operated.

(Panel) Output port setting

Panel Main: MAIN_PWR_CTL	ON
Panel Main: PWR_CTL_MD	ON
Panel Main: CLS_CTL	OFF
DP Rx: HPD	ON
Module: RELAY1 / KDD	OFF
Module: DRF_B	OFF

(Panel) Input port state

Main: DC_IN	OFF
Module: RST2	OFF
Module: PS_PD/PD_TRG_B	OFF

(Panel) Operation outline

Periphery of the Panel main microcomputer, IR, DP Rx and module microcomputer are operated.

Function Standby

(MR) Output port setting

IF: ACTIVE	**ON**
MR Main: RELAY2	**ON**
MR Main: PSW1	OFF

(MR) Input port state

MR Main: RST4	**ON**
MR Main: RST2	OFF
MR Main: PD_TRG	OFF

(MR) Operation outline

- Besides the standby power circuits, part of the Vcc circuits are also activated.
- RGB-SW/AD IC uses the power-save function of the IC.

(Panel) Output port setting

Panel Main: MAIN_PWR_CTL	**ON**
Panel Main: PWR_CTL_MD	**ON**
Panel Main: CLS_CTL	OFF
DP Rx: HPD	**ON**
Module: RELAY1 / KDD	OFF
Module: DRF_B	OFF

(Panel) Input port state

Main: DC_IN	OFF
Module: RST2	OFF
Module: PS_PD/PD_TRG_B	OFF

(Panel) Operation outline

Periphery of the Panel main microcomputer, IR, DP Rx and module microcomputer are operated.
(As same state as the active standby)

KRP-600P

A

Power-On-Related Problems

When the MR is replaced, is the problem resolved? — Yes → Is the relay port of the connector (Pin 25 of CN4203) between the MR MAIN BLOCK Assy and MR POWER SUPPLY Unit high (3.4 V)? — No → [SM for the MR] Failure analysis of the MR MAIN BLOCK Assy => MA2

No (from first box)

Yes (from relay port box) → [SM for the MR] Failure analysis of the MR POWER SUPPLY Unit => PS2

B

Is the relay port of the connector (Pin 13 of CN4501) between the Display MAIN Assy and Display POWER SUPPLY Unit high (3.4 V)? — No → [SM for the Display] Failure analysis of the Display MAIN Assy => PM2

Yes → [SM for the Display] Failure analysis of the Display POWER SUPPLY Unit => PP2

PD/SD-Related Problems

C

The red LED on the Display flashes. → [SM for the Display] See "5.3 DIAGNOSIS OF PD (POWER-DOWN)."

Power-down will not be activated if the drive is off.

The red LED on the MR flashes. → [SM for the MR] See "5.3 DIAGNOSIS OF PD (POWER-DOWN)."

The blue LED on the Display flashes. → [SM for the Display] See "5.4 DIAGNOSIS OF SD (SHUTDOWN)."

D

The blue LED on the MR flashes. → [SM for the MR] See "5.4 DIAGNOSIS OF SD (SHUTDOWN)."

System-Connection-Related Problems

On the Display, the red and blue LEDs alternately flash. On the MR, lit in red LED.

Note:
Only when the system is powered in response to the POWER key on the remote control unit and if it is in trouble do the LEDs flash in this way. If the units are turned on with their POWER keys or with the RS-232C command, even if the system is in failure, the red LEDs on the display and the MR light.

E

When the system cable is replaced, is the problem resolved? — Yes → Replace the system cable.

No

When the MR is replaced, is the problem resolved? — Yes → Failure in IC7602 or its peripheral circuits. Replace the MR MAIN BLOCK Assy.

No

Failure in IC5001 or its peripheral circuits. Replace the Display MAIN Assy.

F

KRP-600P

43

Video-Display-Related Problems

When the system cable is replaced, is the problem resolved? — **Yes** → Replace the system cable.

No ↓

When the MR is replaced, is the problem resolved? — **Yes** → [SM for the MR] Failure analysis of the MR MAIN BLOCK Assy => MA3

No ↓

Is there light emission by reset discharge? — **No** → Is the drive OFF? — **Yes** → Turn the drive ON.

- Check the DRF SW.
- If the drive was turned off with the RS-232C command or with the remote control unit, turn the unit off then turn the drive on.

Is the drive OFF? — **No** → [SM for the Display] Failure analysis of the drive => DR1

Yes ↓

Note: As reset light emission from the G9 panel is dim, be sure to reduce the ambient light for checking.

Does the panel arbitrarily shut off and on repeatedly? Or, are there dark cells on the display? — **No** → [SM for the Display] Failure analysis of the Display POWER SUPPLY Unit => PP3 • In a case of dark cells or repeated on/off.

— **No** → [SM for the Display] Failure analysis of the drive => DR2 • In a case of dark cells.

Yes ↓

Does an erroneous display appear locally? — **Yes** → Does that erroneous display appear by the unit of 1 address or 1 TCP? — **No** → Does that erroneous display appear by the unit of 1 scan? — **No** →

Does that erroneous display appear by the unit of 1 address or 1 TCP? — **Yes** → [SM for the Display] Failure analysis of the drive => DR3

Does that erroneous display appear by the unit of 1 scan? — **Yes** → [SM for the Display] Failure analysis of the drive => DR4

No ↓

Is the panel mask properly displayed? — **No** → [SM for the Display] Failure analysis of the drive => DR2

Replace the panel chassis.

Yes ↓

Check with the combination of the moving/slanting ramp or other mask patterns and mirror function:
- Moving pattern: For checking erroneously discharged cells, load change is constantly caused on a screen.
- Ramp pattern: For checking gradation expression.
- Mirror function: For checking if a defective indication is interlocked with mirror inversion, in order to identify a defective point.

[SM for the Display] Failure analysis of the DIGITAL Assy => DG1

Audio-Related Problems

When the system cable is replaced, is the problem resolved? — **Yes** → Replace the system cable.

No ↓

When the MR is replaced, is the problem resolved? — **Yes** → [SM for the MR] Failure analysis of the audio system => AU1

No ↓ Failure in the display.

[SM for the Display] Failure analysis of the audio system => PA1

A

[2] POWER SUPPLY UNIT

Flowchart of Failure Analysis for The POWER SUPPLY Unit

| Failure analysis for the POWER SUPPLY Unit => PP1 |

STB 3.4 V power is not output.

Is the cable connected firmly to the P7 connector? — No → Properly connect the cable between the P7 and M1 connectors.

Yes

Is the cable to the P7 connector broken? — Yes → Replace the defective cable (J109). | Check the voltage at the MAIN Assy and POWER SUPPLY Unit.

B

No

Is the fuse (F101) blown? — Yes → Replace the POWER SUPPLY Unit.

No

Is one of the limiting resistors (R105/R106/R107/R108) blown? — Yes → Replace the POWER SUPPLY Unit. | Check the resistance between L102 (R105 side) and the D131 anode, using a tester.

No

The POWER SUPPLY Unit is normal.

C

| Failure analysis for the POWER SUPPLY Unit => PP2 |

The power is not on, even though the RELAY port is active.

Is the relay (RL102) on? — No → Replace the POWER SUPPLY Unit. | • Check the relay operation at the terminal (Pin 4 of P4). (Voltage: 3.4 V) • Check the relay sound (click).

Yes

Is the PFC voltage normal? — No → Replace the POWER SUPPLY Unit. | • Check the voltage between the D205 cathode and RC101 (-) terminal. • The voltage must be around 390 V. (340V or less are defective.) **Caution:** High voltage!

Yes

D

The POWER SUPPLY Unit is normal.

| Failure analysis for the POWER SUPPLY Unit => PP3 |

The cells of the panel do not light normally.

Is the VADR voltage within the specified values? — No → Replace the POWER SUPPLY Unit. | The specified voltage values are between 72 and 78 V.

Yes

Is there a fluctuation in the VADR voltage? — Yes → Replace the POWER SUPPLY Unit. | The ripple must be within 5 V.

E

No

Is the VSUS voltage within the specified range? — No → Replace the POWER SUPPLY Unit. | The specified voltage values are between 205 and 215 V (VSU: 125/35°C).

Yes

Is there a fluctuation in the VSUS voltage? — Yes → Replace the POWER SUPPLY Unit. | The ripple must be within 10 V.

No

The POWER SUPPLY Unit is normal.

F

[3] DRIVE ASSY

Flowchart of Failure Analysis for The Drive Assy

Failure analysis for the drive system => DR1

↓

Reset lighting is not displayed.

↓

X/Y DRIVE Assys

↓

Is the waveform normal when the voltage is applied to the panel? —No→ Are the FFC cables properly connected? —No→ Properly connect the FFC cables.

Yes ↓   Yes ↓   NG ↓

Are the panel FPC and SCAN Assys connectors properly connected to the X/Y DRIVE Assys? —No→ Properly connect the panel FPC and SCAN Assys connectors.   Is the input signal normal? —No→ Replace the FFC cables.

Yes ↓   NG   Yes ↓   NG ↓

Replace the panel chassis.   Replace the X/Y DRIVE Assys.   Replace the DIGITAL Assy.

Failure analysis for the
drive system => DR2

↓

Abnormality across the whole
screen such as luminescent spots.

↓

Is the adjustment value of each
voltage within the appropriate range? — No → To "8.4. Adjustment when the Service Panel Assy is Replaced"

* Using ADJ1 on the Panel Factory menu or the QAJ
command, check if the adjustment value is within the
range described in the table below

Yes

When go forward to the section "8.4 Adjustment when the service panel Assy
is replaced" from this step, please be careful to the following items.
• Do not clear hour meter and pulse meter.
   (for readjustment in the panel non-replacement)
• Input a setting value of label mention example as preparations
   (because a product panel does not have a label)

Because it is difficult to identify which drive is in failure, follow the flowchart below to check each Assy.

| Y DRIVE Assy / SCAN Assy | X DRIVE Assy | ADDRESS Assy |

Y DRIVE Assy   Ⓑ   Ⓒ

Are all the connectors properly
connected? — No → Reconnect the connectors.

Yes

Is the VH set voltage (140 V)
correctly set? — No → Set the VH voltage correctly.

Yes

Is the output value of each voltage
from the Y DRIVE Assy appropriate? — No

Yes

• Compare the measurement value at the last output stage of each
  voltage against the value calculated using the measurement value
  of the DAC output voltage. (See the table below.)
• There may be a case where the setting of a Adjustable resistor on
  the Assy is out of range.

Another Assy may
be in failure.

Is the waveform normal when the
voltage is applied to the panel?
(See the oscilloscope photos.)

No

Is the input signal normal?
(See the oscilloscope photos.) — No → Replace the FFC cables.

Yes

NG

Replace the DIGITAL Assy.

Is the waveform of the control
signal from the SCAN Assy normal?
(See the oscilloscope photos.) — No → Replace the Y DRIVE Assy.

Yes

Replace the SCAN IC.

Ⓓ

KRP-600P

(B) X DRIVE Assy

Are all the connectors properly connected? —No→ Reconnect the connectors.

Yes

Is the output value of each voltage from the X DRIVE Assy appropriate? —No→

• Compare the measurement value at the last output stage of each voltage against the value calculated using the measurement value of the DAC output voltage. (See the table below.)
• There may be a case where the setting of a Adjustable resistor on the Assy is out of range.

Yes

(D)

Another Assy may be in failure.

Is the waveform normal when the voltage is applied to the panel? (See the oscilloscope photos.)

No

Is the input signal normal? (See the oscilloscope photos.) —Yes→ Replace the X DRIVE Assy.

No

Replace the FFC cables.

NG

Replace the DIGITAL Assy.

(C) ADDRESS Assy

Are all the connectors properly connected? —No→ Reconnect the connectors.

Yes   No

Is the TCP control signal normal? (See the oscilloscope photos.) —No→ Is the input signal normal? (See the oscilloscope photos.)

Yes   Yes   No

Replace the panel chassis.   Replace the FFC cables.

NG   * Waveform such as the signal is OK for an LVDS signal.

Replace the DIGITAL Assy.

Assy Name	Voltage to be Checked (V)	Adjustable Range	Measurement Point		Computation Formula for Voltage (Absolute Value)	
		60-inch	Output at the Last Stage	DAC Output (*2)	Computation Using DAC Output Voltage (V)	Computation Using Adjustment Value (*4)
Y DRIVE Assy	VSNOFS	040 to 085	CN2404 (*1)	Lower side of R2723 (*3)	55.54 - VOFS_ADJ × 13.91	VOF value × 0.18 + 9.6
	VYRST	001 to 056	CN2401 (*1)	Upper side of R2621 (*3)	VYPRST_ADJ × 62.495 + 75.2	VRP value × 0.81 + 74.4
	VKNOFS1_2	054 to 107	CN2405 (*1)	Left side of R2754 (*3)	YVKNOFS1_ADJ × 36.85 + 159.3	(V1F value+VYF value-128) × 0.48 + 158.8
	VKNOFS3	065 to 117	CN2403 (*1)	Right side of R2757 (*3)	YVKNOFS3_ADJ × 36.85 + 159.3	(V3F value+VYF value-128) × 0.48 + 158.8
	VKNOFS4	111 to 164	CN2406 (*1)	Right side of R2755 (*3)	YVKNOFS4_ADJ × 36.85 + 159.3	(V4F value+VYF value-128) × 0.48 + 158.8
X DRIVE Assy	XKOFS1	105	CN1302 (*1)	K1402 (*1)	XKNOFS1_ADJ × 27.3 + 30	VX1 value × 0.35 + 29.7
	XKOFS2	063	CN1301 (*1)	K1401 (*1)	XKNOFS2_ADJ × 25.0 + 69.8	VX2 value × 0.32 + 69.5

(*1): These parts have not been mounted.
(*2): It is recommended to measure the DAC output voltage with the drive off.
(*3): View when the Assy is mounted on the unit and viewed from the rear.

(*4): The value calculated using an adjustment value may be different from the value measured at the last output stage, because various corrections such as temperature correction are not taken into consideration.

A

Failure analysis for the
drive system => DR3

Diagnose the ADDRESS Assy.

The abnormality is associated with
one ADDRESS or one TCP.

Is the TCP control signal normal? —No→ Are the FFC cables properly connected? —No→ Properly connect the FFC cables.

Yes

Yes

NG

B

Replace the panel chassis. ←NG— Replace the DIGITAL Assy.

If the FFC cable that connects the DIGITAL and ADDRESS Assys is in failure,
the abnormality is associated with one address in most cases.

In most cases of damage on one line,
the panel chassis must be replaced.

- -

Failure analysis for the
drive system => DR4

Diagnose the SCAN Assy.

C

The abnormality is associated
with a single scan line.

Is the waveform normal when the
voltage is applied to the panel?
(See the oscilloscope photos.)
Note1 —No→ Is the 15P connector connected properly to the socket? —No→ Reconnect the connector properly.

Yes

Yes

NG

Is the waveform of the SCAN IC
control signal from the Y DRIVE
Assy normal? —No→ Replace the Y DRIVE Assy.

D

Yes

Replace the SCAN IC. ←

NG

Replace the panel chassis.

Note 1:
In a case where confirmation of the waveform for a particular line is impossible with
an oscilloscope, it is possible to identify a defective line by lighting a particular line,
using the following commands: (The SCAN IC outputting each line refers to the table.)
PON
FAY
MKRS01
BSMS01 (Command for reducing phosphor burn-in)
$250000**** (In place of ****, input a figure between 0001 and 1080, which denotes
an ordinal number of a particular line.)

With the above commands, a particular line lights. Be careful to light a line for as
short a time as possible, to avoid phosphor burn-in.
After a particular line is identified, display an all-white screen to protect the screen
from burn-in.

IC No.	Line Number	Object Line
No 1	66	0001 to 0066
No 2	68	0067 to 0134
No 3	68	0135 to 0202

[5] MAIN ASSY (PANEL INTERFACE)

Flowchart of Failure Analysis for The MAIN Assy

Failure analysis for the
MAIN Assy => PM1

Does the POWER switch on? — No → Turn the POWER switch on.

Yes

Is resetting of the Main micro-computer (IC7001) canceled? — No → Replace the MAIN Assy.   Failure in the RST IC (IC7002) output or its peripheral circuits.

Yes

Is the voltage at Pin 3 of the M11 connector High? — No → Replace the MAIN Assy.   Failure in the line between the Main microcomputer and M11 connector.

Yes

Is the M11 connector securely connected? — No → Securely connect the M11 connector.

Yes

Is the cable that is connected to the M11 connector broken? — Yes → Replace the cable (J116).

No

No problem with the MAIN Assy. Check the LED Assy.

- -

Failure analysis for the
MAIN Assy => PM2

The RELAY port does not work. The power is not turned on.

Is the voltage at Pin 50 of the M8 connector 3.4 V? — No → Replace the MAIN Assy.   It does not supply a power supply to the module microcomputer.

Yes

Is the voltage (3.4 V) supplied to the main microcomputer? — No → Replace the MAIN Assy.

Yes

Can the unit be turned on, using the remote control unit? — No → Replace the cable (J117) that connects between the IR and MAIN Assys. — NG → Replace the IR Assy. — NG → Replace the MAIN Assy.

Yes

Can the unit be turned on, using RS-232C commands? — No → Replace the MAIN Assy.

- -

Failure analysis for the
MAIN Assy => PM3

Video signal is not output to the DIGITAL Assy. OSD is not displayed.

Check that the clock, H sync, V sync, and DE signals are input to IC4004. — No → Replace the MAIN Assy.   Failure in the IC5001 or its peripheral circuits.

Yes

Check that the clock is input to R4022, and H sync, V sync, and DE signals are input to R4021. — No → Replace the MAIN Assy.   Failure in the IC4001-IC4004 or its peripheral circuits.

Yes

Replace the MAIN Assy.   • Failure in CN4002 or its peripheral circuits.

KRP-600P

[6] AUDIO SYSTEM

Flowchart of Failure Analysis for The Audio System

=> PA1

Sound has been emitted from the speakers. → Is sound muting set? — Yes → Cancel muting, then check again.

↓ No

Is the volume set to 0? — Yes → Raise the volume, then check again.

↓ No

Is not headphone inserted? — No → Pull out headphone, then check again.

↓ Yes

Check the speakers and speaker cables. Is it no problem? — No → Replace the speakers or speaker cables.

↓ Yes

Is not a signal output from speaker terminals? ①② — No → Replace the speakers or speaker cables.

↓ Yes

Are the CN8301 and CN8302 connectors securely connected? — No → Securely connect the connectors.

↓ Yes

Is not a PWM signal output from IC8401? (pins 34, 38, 46, 50) ③④ — No → Replace the AUDIO Assy.

↓ Yes

Is not a PWM signal output from IC8341? (pins 40 to 43) ⑤⑥ — No → Replace the AUDIO Assy.

↓ Yes

Is not a I2S signal output from IC5001? (pins 18 to 21) ⑦⑧ — No → Check the IC8341 and peripheral circuit. Repair the failure points or replace the AUDIO Assy.

↓ Yes

Replace the MAIN Assy.

Communication line between MDU and SQ_LSI	IC3601/IC3301	SQ_IC communication not established. IC3301 may not have properly started up.
Drive detectig signal of MDU (SQ_NON)	CN3201/IC3601/ IC3301/IC3607	A shutdown occurs if the drive waveform periodically does not output. (When SQ_NON of MDU input is High, a shutdown is generated.)
Communication line between MDU and SQ_LSI (BUSY_SQ)	IC3601/IC3301	If BUSY_SQ remains high, a shutdown is generated.
Check the DIGITAL Assy and the software version of SEQ and the destination of the panel. Check the connection between [X1] and [D22].	IC3601/IC3301	When the identification resistor of PSIZE/PLANT and software version of SEQ are incoherent, a shutdown occurs.
Check the DIGITAL Assy and the software version of SEQ and the destination of the panel. Check the connections between [X1] and [D22], and [SE1] and [D24]. Communication line between MDU and BACKUP EEPROM	IC3601/ SENSOR Assy(IC3902)	When the identification resistor of PSIZE/PLANT and stored content of EEPROM on the SENSOR Assy are incoherent, a shutdown occurs.
Check the DIGITAL Assy and the software version of SEQ and the destination of the panel. Check the connections between [X1] and [D22]. Communication line between MDU and DIG EEPROM	IC3601/IC3602	When the identification resistor of PSIZE/PLANT and stored content of EEPROM on the DIGITAL Assy are incoherent, a shutdown occurs.
Communication line between MDU and DIG EEPROM	IC3601/IC3602	
Communication line between MDU and BACKUP EEPROM	IC3601/SENSOR Assy(IC3902)	
Communication line between MDU and DAC	IC3601/IC3605	
3.3 V output (TP3881) of DDC	IC3801/IC3805	If RST2 does not become high after the unit is turned on, a shutdown will be generated in several seconds.
V+6.5V of POWER SUPPLY Unit (Check [D25][P4]) FU3801 has melted.	POWER SUPPLY Unit, FU3801	Check if V + 6_5 V is started. Also check if the FU3801 on the DIGITAL Assy has been melted.
Installation environment	SENSOR Assy (IC3901)	If TEMP1 that is read by the module microcomputer is 85 °C or higher, a shutdown will be generated.
Installation environment Check the connection between [SE1] and [D24].	SENSOR Assy (IC3901)	If TEMP1 that is read by the module microcomputer is –20 °C or less, a shutdown will be generated. Also check the connection between SE1 and D24.
Speaker terminals	JA8551	Check if any speaker cable is in contact with the chassis.
D_AMP	IC8401	Check if the AMP output is short-circuited.
6.5 V power supply for AUDIO Assy	R4203	Check that V+6_5 V is activated in the AUDIO Assy. If it is not, check if R4203 on the MAIN Assy is open.
Periphery of the cable between MAIN and AUDIO, and POWER SUPPLY and AUDIO Assys	CN4201,CN8301, CN8302	Check if cables are firmly connected.
D_AMP	IC8401	Check the temperature of D_AMP IC that is 125 °C or higher.
Communication line between main ucom and module ucom	IC7001,IC3601	Check the communication lines (TXD_MD/RXD_MD/REQ_MD).
Periphery of the cable between MAIN and DIGITAL Assys	CN4002,CN3201	Check if cables are firmly connected.
Communication line between main ucom and DisplayPort Rx	IC7001,IC5001	Check the communication lines (SCL_DP/SDA_DP).
Communication line between main ucom and PWM processor	IC7001,IC8341	Check the communication lines (SCL_AV/SDA_AV).
Periphery of the 3.3 V regulator for IC	IC8331	Check that the voltage outputs it.
Periphery of the cable between MAIN and AUDIO Assys	CN4201,CN8301	Check if cables are firmly connected.
Dirt attached to the fan motor		Check the fan. (SD10 does not detect it at the temperature that fans do not turn.)
Periphery of the cable between MAIN and FAN Assys	CN4101,CN1201	Check if cables are firmly connected.
Periphery of the cable between FAN and FAN CH Assys	CN1202,CN3304	Check if cables are firmly connected.
Periphery of the cable between FAN CH Assy and Fan motor	CN3302	Check if cables are firmly connected.
Periphery of the fan control regulator	IC1202	Check that the voltage outputs it.
Dirt attached to the fan motor		Check the fan. (SD10 does not detect it at the temperature that fans do not turn.)
Periphery of the cable between MAIN and FAN Assys	CN4101,CN1201	Check if cables are firmly connected.
Periphery of the cable between FAN and FAN CH Assys	CN1202,CN3304	Check if cables are firmly connected.
Periphery of the cable between FAN CH Assy and Fan motor	CN3301	Check if cables are firmly connected.
Periphery of the fan control regulator	IC1201	Check that the voltage outputs it.
Ambient temperature of the panel section and temp. sensor	IC1203	Shutdown occurs if the periphery of IC1203 (temp. sensor) is high temperature.
Periphery of the cable between MAIN and FAN Assys	CN4101,CN1201	Check if cables are firmly connected.
Periphery of the cable between FAN and SENS Assys	CN1203,CN2401	Check if cables are firmly connected.
6.5 V power supply of the MAIN Assy	CN4502	Check if V + 6_5 V is started.
Communication line between main ucom and EEPROM	IC7001, IC7003	Check the communcation lines (SCL_E2P/SDA_E2P)

5.5 NON-FAILURE INFORMATION

A

[1] FUNCTION OF DECREASING THE BRIGHTNESS LEVEL

If the panel temperature becomes high or a video signal that requires activation of panel protection is input, the unit will protect the panel by decreasing the brightness level.
* While a mask is being displayed, the panel protection function will not be activated.

Protection Function Name	Purpose	Conditions	Protection Function	Remarks
High-temperature protection function 1	For protection of parts (DCF)	Panel temperature (TEMP1) reaches 65 ºC.	Offsetting the ABL adjustment value	
High-temperature protection function 2	For reducing heating in the unit	Panel temperature (TEMP1) reaches 80 ºC.	Limiting for the maximum number of SUS pulses	
Panel protection function 1	For preventing burn-in	A still image is displayed for 3 minutes or more.	Limiting for the maximum number of SUS pulses	The picture will be considered to be still if only the mouse cursor is moved.
Panel protection function 2	For protection of SCAN ICs	An image with which a particular load is applied to one SCAN IC is displayed. (See Fig. 2)	Limiting for the maximum number of SUS pulses	
Panel protection function 3	For protection against panel cracking	An image with which the heat of part in the panel is increased is displayed. (See Fig. 3)	Limiting for the maximum number of SUS pulses	

■ Limiting for the maximum number of SUS pulses

By gradually decreasing the limit for the maximum number of SUS pulses, the temperature of the panel will be lowered.
• The limit for the maximum number of SUS pulses will be decreased by 8 per 5 seconds.
• The lower limit for the maximum number of SUS pulses is about 700.
• The maximum number of SUS pulses will begin to increase gradually if the conditions that led to activation of the protection function return to normal.

■ ABL adjustment value offset

By gradually offsetting the ABL adjustment value, the temperature of the panel will be lowered. The number of SUS pulses, which is determined based on the input APL (average picture level), will be decreased.
• The ABL adjustment value will be offset by one step per 30 seconds.
• The ABL adjustment value will be gradually restored if conditions that let to activation of the protection function return to normal.
Fig. 2: Detection example: SCAN IC protection
Fig. 3: Detection example: Protection against panel cracking

Fig. 1: Relationship between input APL and number of SUS pulses

5.6 OUTLINE OF THE OPERATION

[1] PANEL DRIVE-POWER ON/OFF FUNCTION

Function:
It is an operational mode where the digital signal processing performs circuit operation but the power is not supplied to the panel driving system (Vsus, VAddress) in order to avoid a power down (PD).

Application:
1. When it is necessary to check whether the signal output is correctly reaching the drive system in a repairing activity etc.
2. In the case of a PD, to determine whether the problem is with the panel drive-power supply or with the other system power supply.

Method:
1. Short-circuit between the specified location of the POWER SUPPLY Unit and GND (Multi base section recommended), using a jumper with alligator clips (refer to the photos below).
2. Execute [DRV S00] by RS-232C command. ([DRV S01] for release)

Supplemental explanation:
• When the panel drive-power is in OFF state, there will be no PD, except PS_PD, as the PD signal has been muted.
• If the clip is removed in the OFF state of the panel drive-power, PD will take place at the instance of clip removal. Therefore, be sure to remove the clip after turning the power OFF.
• Under RS-232C command control, [DRV S01] (release) is possible during power ON. However, there is a possibility of damaging the set. Therefore, make this operation only after turning the power OFF.
• Command [DRV S00/S01] is effective even during standby.
• Setting with RS-232C commands or the remote control unit is enabled during Standby mode. However, if the unit is left unoperated for about 10 seconds in Standby mode after setting with RS-232C commands or the remote control unit is completed, the setting will become void.
• When the main power switch is set to OFF, no command is accepted.
• Setting with RS-232C commands or the remote control unit will become void if the AC power cord is unplugged, the main power switch is set to OFF, or the unit is left unoperated for about 10 seconds in Standby mode.

When the panel drive-power is ON
When the panel drive-power is OFF

              FAN B: 51   53   FAN B: 55   57

- The operating temperature of the fan is higher than the ambient temperature, because the sensor temperature is read by the microcomputer.
- If the critical values for signals are displayed in the address circuit, the fan may be activated or be rotated at higher speed in response to values lower than the set temperature values shown above.
- Depending on the ventilation conditions behind the unit, the fan may be activated or be rotated at higher speed in response to values lower than the set temperature values shown above.
- When the temperature rises, the sensor voltage of TEMP3 increases.
- When the voltage of the DAC output from the Panel Main microcomputer decreases, rotation speed of the fan rises.
- Normally, the T1 temperature sensor output is used to control the fan.
  The T2 sensor detects the temperature inside the unit and assists T1.

F

[3] PROCESSING IN ABNORMALITY

Speaker short-circuit

● **Circuit configuration**

● **Specifications for port monitoring**

Port Name	SD/PD Indication	Determination Condition	Monitoring conditions	Operation
A_NG_B	AUDIO	Shutdown occurs when the signal is "L." 30 mS ∗ 10 times	DC_IN = "H" (always) (Monitoring starts 2 sec after the above conditions are established.)	The main CPU operations described below will be performed when either "A_NG_B = L" or "OTW = L" is detected (established) under the monitoring conditions.
OTW	AUDIO	Shutdown occurs when the signal is "L." 120 mS ∗ 3 times		

● **Operation specifications of the main CPU**

(1) Establish the short-circuit of the speaker by the main CPU
  • After a warning indication is displayed for 5 sec, a shutdown is generated (the blue LED flashes 5 times).
  • A warning indication is displayed for all input-signal types.
  • Example of a warning indication: "The speaker terminals are short-circuited. After reconnection, turn the unit on again."

(2) Display conditions
    When the panel is on: A warning indication is displayed immediately.
    When the panel is off: A warning indication is not displayed immediately but is displayed when the panel is turned on.
  Note: A warning indication is displayed each time the panel is turned on if the conditions for a shutdown persist.

● **Conditions for resetting the circuits**

The circuits will be reset upon Standby ON/OFF.

Power supply

● **Circuit configuration**
● **Specifications for port monitoring**

Port Name	SD/PD Indication	Determination Condition	Monitoring conditions	Operation
DC_IN	PANEL MAIN power (MB-POW)	If the signal to DC IN does not become H within 5 seconds after the PON command is issued, the unit will shut itself off.	• During panel screen ON	Shutdown occurs immediately Blue LED flashes 13 times

Fan and temperature sensor

● **Circuit configuration**

● **Specifications for port monitoring**

Port Name	SD/PD Indication	Determination Condition	Monitoring conditions	Operation
FAN_NG_A FAN_NG_B	FAN	Shutdown occurs when the signal is "H." 1 S * 15 times	DC_IN = H and FAN_ON_A = H (Monitoring starts 3 sec after the above conditions are established.)	Shutdown occurs immediately Blue LED flashes 10 times
TEMP1	Panel temperature is high	Shutdown occurs if any values equal to or greater than minimum to require a shutdown are detected. 200 mS * 5 times	Digital video RST2 = H	Shutdown occurs after waiting for 30 sec. Blue LED flashes 4 times
	Panel temperature is low			Shutdown occurs after waiting for 3 sec. Blue LED flashes 4 times
TEMP3_1	Ambient temperature of the display	Shutdown occurs if any values equal to or greater than minimum to require a shutdown are detected. 1 S * 3 times	DC_IN = H (Monitoring starts 1 sec after the above conditions are established.)	In the Panel screen ON: Shutdown occurs after the warning indication is displayed for 30 sec. Blue LED flashes 11 times
TEMP3_2	Inside temperature of the display	Shutdown occurs if any values equal to or greater than minimum to require a shutdown are detected. 1 S * 3 times	DC_IN = H (Monitoring starts 1 sec after the above conditions are established.)	In the Panel screen ON: Shutdown occurs after the warning indication is displayed for 30 sec. Blue LED flashes 11 times

KRP-600P

[4] Standalone Operation Mode

Standalone Operation mode is available with the KRP-600P and KRP-500P, by issuing the RS-232C command shown below. After disconnecting the system cable, connect an RS-232C cable to the display unit to issue a command.

SYSS00: Standalone Operation mode
SYSS01: System Operation mode

Data transfer rate at Standalone Operation mode: 9600 bps

Straight cable (D-SUB, 9-pin)

PC for controlling (Connect to the D-SUB [9-pin] connector of the display unit.)
Notes:
- To update the software for the display, disconnect the system cable, connect an RS-232C cable (straight), then perform updating.
- During System Operation mode, most of the RS-232C commands are invalid.
- The setting data during Standalone Operation mode immediately before the display is turned off will be stored in memory. After finishing operation in Standalone Operation mode, be sure to issue the SYSS01 command to return the display to System Operation mode before reconnecting it to the MR. If the display is connected to the MR without returning it to System Operation mode, the MR will automatically enter Standby mode soon after it is turned on, in which case no image will be displayed even though the display is turned on.
- No audio nor video signals are output if any display port cable other than the one for this display is connected to its system cable port (terminal). The mask signal (output in response to a mask command) is the only video output available during Standalone Operation mode.
- During normal System Operation mode (SYSS01) the display monitors the connection status with the MR.
  If communication between the MR and the display cannot be established for any reason, such as disconnection of the system cable or MR's AC power being off, a system error warning will be indicated with the LED and on the mask screen for about 10 seconds, after which the display will automatically shut itself off. (Even after power-off, flashing of the LED for warning continues.)

ON

BLUE　RED

After 10 sec.

STANDBY

Turn on with the remote control unit.
(After about 7 sec.)

KRP-600P

5.7 OUTLINE OF RS-232C COMMAND

[1] PREPARED TOOLS

It is necessary to prepare the following one to use 232C command.
- PC
- Application for control
- 232C cable (straight)

∗ The setting of the Com port cannot be communicated if it doesn't do correctly.
  (Please follow a set explanation of PC in the Com port)

[2] USING RS-232C COMMANDS

Issue the SYSS00 command to set the unit to Standalone Operation mode.

KRP-600P

5.8 LIST OF RS-232C COMMANDS

Note: While the display is in System Operation mode (SYSS01) with the Media Receiver (MR,) among the received commands via the RS-232C connector on the display, only the SYS commands are valid.
To enable other RS-232C commands, set the display to Standalone Operation mode (SYSS00).

5.9 DETAILS OF RS-232C COMMANDS

[1] QS1 (PANEL STATUS)

Model information and version information are returned.

Command Format	Effective Operation Modes	Function	Remarks
[QS1]	Every Time	Output of status	Return data: 3 (ECO) + 112 (DATA) + 2 (CS) = 117 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS1
1	Resolution/Size	1 byte	F
2	Panel Generation	1 byte	9
3	Destination	1 byte	*
4	Grade	1 byte	*
5	Panel Product Form	1 byte	A
6	Boot version of Module microcomputer	3 byte	-01A
7	Program version of Module microcomputer	8 byte	-01A ' ' ' '
8	Boot version of sequence processor	3 byte	-01Z
9	Program version of sequence processor	8 byte	-01Z ' ' ' '
10	Panel information	8 byte	G9_50F_2
11	Derivative operation identification	1 byte	*
12	Reserved (panel section)	7 byte	*******
13	, (comma)	1 byte	,
14	MTB generation	1 byte	9
15	MTB destination	1 byte	A
16	MTB grade	1 byte	H
17	MTB product form	1 byte	B
18	Program version of IF microcomputer	8 byte	-01A
19	Boot version of IF microcomputer	4 byte	01A
20	Program version of Main microcomputer	8 byte	-01A
21	Boot version of Main microcomputer	4 byte	01A
22	Common version of ASIC	8 byte	-01A
23	Boot version of ASIC	8 byte	01A
24	PRS version of ASIC	8 byte	-01A
25	PIC version of ASIC	8 byte	-01A
26	Common version of the Digital Tuner	8 byte	-0A
27	Boot version of the Digital Tuner	4 byte	01A
CS	2 Byte	2 byte	4A

11: Derivative Operation Identification

*	Standard model operation
1	Derivative model operation

14: MTB Generation

9	G9

15: MTB Destination

A	North America
C	China
E	Europe
G	General
J	Japan
U	Australia

16: MTB Grade

H	Elite/One body Europe HD /System Europe HD/One body Australia
T	Regular/One body Europe SD
D	Derivative Model
*	No Grade (Japan/General/China)

17: MTB Product Form

B	One body model
S	System model

1: Resolution/Size

F	50-FHD (1920*1080)
G	60-FHD (1920*1080)

2: Panel Generation

9	G9

3: Destination

*	Commonness

4: Grade

*	Commonness
Z	Evaluation

5: Not used

A	"A" fixed

10: Panel Information (8 Byte)

1 to 2nd byte	G9	Generation information
4 to 5th byte	50	50 inch
	60	60 inch
6th byte	F	FHD
8th byte	3	50 inch 2nd PLANT (Reserved)
	2	50 inch 2nd PLANT
	1	50 inch 1st PLANT
	'	Others

' = space

[2] QS2 (PANEL OPERATION DATA)

The command QS2 is for acquiring data on the panel's operational information.

Command Format	Effective Operation Modes	Function	Remarks
[QS2]	Every Time	Output of status	Return data: 3 (ECO) + 34 (DATA) + 2 (CS) = 39 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS2
1	Notify of the standby operation transition	1 byte	1
2	Adjustment flag of the main unit	1 byte	0
3	Adjustment-data backup flag	1 byte	0
4	"1st PD" data	1 byte	0
5	"2nd PD" data	1 byte	0
6	Color sensor data	1 byte	0
7	Reserved	2 byte	**
8	Temperature data (TEMP 1)	3 byte	128
9	SD data	1 byte	0
10	SD subcategory data	1 byte	0
11	Operation status induced by SD	1 byte	0
12	Reserved	3 byte	***
13	HOUR METER	8 byte	00000259
14	MASK indication	1 byte	0
15	Still picture detection	1 byte	0
16	SCAN protection detection	1 byte	0
17	Panel crack detection	1 byte	0
18	Address emergency detection	1 byte	0
19	Reserved	4 byte	****
CS	2 Byte	2 byte	4A

1: Power supply status

P	During power ON
0	Shifting to Passive Standby is not possible.
1	Shifting to Passive Standby is possible.

2: Adjustment flag of the main unit

0	Adjustment completed
1	Adjustment not completed

3: Adjustment-data backup flag

0	Adjustment completed
1	Adjustment not completed

4, 5: PD data

0	No PD data
2	POWER
3	SCAN
4	SCN-5V
6	Y-DCDC
7	Y-SUS
8	ADRS
A	X-DCDC
B	X-SUS
C	DIG-DCDC
F	UNKNOWN

6: Color sensor data

-	Function OFF (including standby)
0	Normal
1	Hardware connection is not completed
2	Data mismatching

9: SD data

0	No SD
1	SQ_LSI
2	MDU-DEVICE
3	RST2
4	Panel temperature

10-1: SD subcategory (SQ_LSI)

0	No SD-Sub data
1	Communication error
2	Drive stop
3	BUSY
4	Version mismatching (H/S)
5	Version mismatching (H/M)
6	Version mismatching (H/I)

10-2: SD subcategory (MDU-DEVICE)

0	No SD-Sub data
1	EEPROM
2	BACKUP
3	DAC

10-3: SD subcategory (Panel temperature)

0	No SD-Sub data
1	Panel high temperature
2	Panel low temperature

11: Operation status induced by SD

0	Normal
1	Relay-off completed
2	During warning indication

14: MASK indication

0	MASK-OFF
1	MASK-ON

15 to 18: Detection of Each Protection function

0	Normal operation
1	At detection of protection operation

KRP-600P

[3] QS3 (OTHER DATA ON THE PANEL)

The command QS3 is for acquiring data on operational information of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QS3]	Every Time	Output of status	Return data: 3 (ECO) + 58 (DATA) + 2 (CS) = 63 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS3
1	SERIAL	15 byte	- - - - - - - - - - - - - - -
2	HOUR METER	8 byte	00000000
3	TOTAL HR METER	8 byte	00000000
4	PON COUNTER	8 byte	00000000
5	Panel temperature (*1)	5 byte	23.5
6	Reserved (TEMP0 acquisition)	5 byte	_ _ _._
7	MAX panel temperature history (*1)	5 byte	78.3
8	Reserved	4 byte	∗∗∗∗
CS	2 Byte	2 byte	94

Note
(*1) : Centigrade scale

[4] QS5 (COLOR SENSOR DATA)

The command QS5 is for acquiring the color sensor information.

Command Format	Effective Operation Modes	Function	Remarks
[QS5]	Every Time	Output of status	Return data: 3 (ECO) + 45 (DATA) + 2 (CS) = 50 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QS5
1	Color sensor data (Note)	1 byte	2
2	RED data of color sensor	4 byte	0425
3	GREEN data of color sensor	4 byte	2112
4	BLUE data of color sensor	4 byte	5000
5	Reserved	32 byte	∗∗ to ∗∗
CS	2 Byte	2 byte	94

Note: The color sensor data is output as the same data as QS2.

[5] QSP (SUB VERSION OF THE PANEL SECTION)

The command QSP is for acquiring sub version data on software of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QSP]	Every Time	Output of status	Return data: 3 (ECO) + 40 (DATA) + 2 (CS) = 45 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QSP
1	MDUcom-PRG	8 byte	=01Y
2	MDUcom-DATA_TBL	8 byte	=01Y ''''
3	SQ_LSI-PRG	4 byte	=01Y
4	SQ_LSI-PIC_TBL	8 byte	=01Y ''''
5	SQ_LSI-SEQ_DATA	4 byte	=01Y
6	Reserved	8 byte	********
CS	2 Byte	2 byte	A3

[6] QAJ (PANEL ADJUSTMENT DATA)

The command QAJ is for acquiring the panel's factory-preset data.

Command Format	Effective Operation Modes	Function	Remarks
[QAJ]	Every Time	Output of status	Return data: 3 (ECO) + 84 (DATA) + 2 (CS) = 89 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QAJ
1	Vsus adjustment value	3 byte	128
2	Vysnofs adjustment value	3 byte	128
3	Vyprst adjustment value	3 byte	128
4	Vxpofs1 adjustment value	3 byte	128
5	Vxpofs2 adjustment value	3 byte	128
6	Vyknofs1,2 adjustment value	3 byte	128
7	Vyknofs3 adjustment value	3 byte	128
8	Vyknofs4 adjustment value	3 byte	128
9	Δ Vyknofs1,2/3/4 adjustment value	3 byte	128
10	Reserved	6 byte	******
11	R1K adjustment value	3 byte	128
12	R2K adjustment value	3 byte	128
13	Y1K adjustment value	3 byte	128
14	Y1Z adjustment value	3 byte	128
15	X1B adjustment value	3 byte	128
16	Y2B adjustment value	3 byte	128
17	X3B adjustment value	3 byte	128
18	YSB adjustment value	3 byte	128
19	XSB adjustment value	3 byte	128
20	YTK adjustment value	3 byte	128
21	YTZ adjustment value	3 byte	128
22	Y2K adjustment value	3 byte	128
23	Y2Z adjustment value	3 byte	128
24	YNK adjustment value	3 byte	128
25	SAT adjustment value	3 byte	128
26	Reserved	3 byte	***
27	AM radio countermeasure	1 byte	1
28	Reserved	2 byte	**
CS	2 Byte	2 byte	B7

27: AM radio countermeasure	
n	n: 1 to 8 (SUS frequency n)

KRP-600P

[7] QPW (VIDEO ADJUSTMENT DATA OF THE PANEL)

The command QPW is for acquiring the factory-preset data about the video of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPW]	Every Time	Output of status	Return data: 3 (ECO) + 40 (DATA) + 2 (CS) = 45 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPW
1	Type of drive sequence (Note 1)	4 byte	60VS
2	ABL adjustment table	1 byte	1
3	Type of WB adjustment table (Note 1)	1 byte	1
4	ABL adjustment value	3 byte	128
5	R-HIGH adjustment value	3 byte	256
6	G-HIGH adjustment value	3 byte	256
7	B-HIGH adjustment value	3 byte	256
8	R-LOW adjustment value	3 byte	512
9	G-LOW adjustment value	3 byte	512
10	B-LOW adjustment value	3 byte	512
11	R gamma setting	2 byte	31
12	G gamma setting	2 byte	10
13	B gamma setting	2 byte	10
14	Streaking correction	1 byte	1
15	Center luminance correction	1 byte	0
16	Reserved	1 byte	*
17	Interlocked with APL	1 byte	0
18	Transition of protective operations	1 byte	0
19	Reserved	2 byte	**
CS	2 Byte	2 byte	37

1: Type of Drive sequence

50VS	Video 50 Hz
60VS	Video 60 Hz
72VS	Video 72 Hz
75V1	Video 75-1 Hz
75V2	Video 75-2 Hz
60PS	PC 60 Hz

2: ABL adjustment table

n	n: 1 to 3

3: Type of WB adjustment table

n	n: 1 to 4

11, 12, 13: RGB Gamma setting

n	00 to 31

15: Center luminance correction

0	OFF
1	ON
2	ON (interlocked with APL)

17: Interlocked with APL

0	OFF
1	ON
2	WB interlocked ON/γ OFF
3	WB interlocked OFF/γ ON

18: Transition of protective operations

0	Upper limit state for brightness
1	Brightness being reduced
2	Lower limit state for brightness
3	Brightness being increased

Note 1: The "75 Hz-2" Drive Sequence type signals and WB Adjustment Table 4 are output only when "75 Hz-2" (VFQS07) is selected for internal signals (mask signals).
When external signals are selected and the Drive Sequence type is 75 Hz, "75 Hz-1" is output because "75 Hz-1" and "75 Hz-2" are not distinguished for external signals.

[8] QPF (FUNCTION OF THE PANEL)

The command QPF is for acquiring the characteristic and the function setting value of the panel.

Command Format	Effective Operation Modes	Function	Remarks
[QPF]	Every Time	Output of status	Return data: 3 (ECO) + 69 (DATA) + 2 (CS) = 74 Byte

	Data Arrangement	Data Length	Output Example
ECO		3 byte	QPF
1	R-REVISE setting value	1 byte	0
2	G-REVISE setting value	1 byte	0
3	B-REVISE setting value	1 byte	0
4	Reserved	3 byte	***
5	ADDRESS L1,L2 setting value	2 byte	01
6	ADDRESS L3,L4 setting value	2 byte	13
7	ADDRESS U1,U2 setting value	2 byte	32
8	ADDRESS U3,U4 setting value	2 byte	30
9	Reserved	4 byte	****
10	Streaking correction	1 byte	1
11	Full-screen black display mode	1 byte	1
12	Reserved	4 byte	****
13	PANEL RX	3 byte	512
14	PANEL RY	3 byte	512
15	PANEL GX	3 byte	512
16	PANEL GY	3 byte	512
17	PANEL BX	3 byte	512
18	PANEL BY	3 byte	512
19	Reserved	6 byte	******
20	Color sensor R coefficient	3 byte	***
21	Color sensor G coefficient	3 byte	***
22	Color sensor B coefficient	3 byte	***
23	Reserved	12 byte	** to **
CS	2 Byte	2 byte	37

1: 2: 3: RGB-REVISE setting value

n	n: 0 to 7 (Level n)

5 to 8: ADDRESS α, β setting

nm	n: 0 to 9 (Address α setting PHASE n)
	m: 0 to 9 (Address β setting PHASE m)

10: Streaking correction

0	OFF
n	n: 1 to 8 (Mode n)

11: Full-screen black display mode

0	OFF (In-phase SUS drive prohibition)
1	MODE1 (In-phase SUS drive permission)

[9] QPM (PULSE METER VALUE)

The command QPM is for acquiring the accumulated pulse count.

Command Format	Effective Operation Modes	Function	Remarks
[QPM]	Every Time	Output of status	Return data: 3 (ECO) + 40 (DATA) + 2 (CS) = 45 Byte

	Data Arrangement	Data Length	Output Example
ECO		3 byte	QPM
1	Pulse meter B 1	8 byte	00000000
2	Pulse meter B 2	8 byte	00000000
3	Pulse meter B 3	8 byte	00000000
4	Pulse meter B 4	8 byte	00000000
5	Pulse meter B 5	8 byte	00000000
CS	2 Byte	2 byte	E7

Note:
The minimum for a returned value of the pulse meter for each block (B1-B2) is one million.

KRP-600P

[10] QPD (POWER DOWN LOGS)

The command QPD is for acquiring data from the 8 latest power-down (PD) logs.

Command Format	Effective Operation Modes	Function	Remarks
[QPD]	Every Time	Output of status	Return data: 3 (ECO) + 80 (DATA) + 2 (CS) = 85 Byte

Data Arrangement		Data Length	Output Example
ECO		3 byte	QPD
1	Latest "1st PD" data	1 byte	A
2	Latest "2nd PD" data	1 byte	2
3	Data from the hour meter for the latest PD	8 byte	00010020
4	Second latest "1st PD" data	1 byte	E
5	Second latest "2nd PD" data	1 byte	9
6	Data from the hour meter for the second latest PD	8 byte	00008523
7	Third latest "1st PD" data	1 byte	4
8	Third latest "2nd PD" data	1 byte	3
9	Data from the hour meter for the third latest PD	8 byte	00004335
10	Fourth latest "1st PD" data	1 byte	2
11	Fourth latest "2nd PD" data	1 byte	0
12	Data from the hour meter for the fourth latest PD	8 byte	00000945
13	Fifth latest "1st PD" data	1 byte	4
14	Fifth latest "2nd PD" data	1 byte	0
15	Data from the hour meter for the fifth latest PD	8 byte	00000715
16	Sixth latest "1st PD" data	1 byte	A
17	Sixth latest "2nd PD" data	1 byte	2
18	Data from the hour meter for the sixth latest PD	8 byte	00000552
19	Seventh latest "1st PD" data	1 byte	A
20	Seventh latest "2nd PD" data	1 byte	0
21	Data from the hour meter for the seventh latest PD	8 byte	00000213
22	Eighth latest "1st PD" data	1 byte	D
23	Eighth latest "2nd PD" data	1 byte	0
24	Data from the hour meter for the eighth latest PD	8 byte	000001A7
CS	2 Byte	2 byte	27

● PD data

0	No PD
2	P-POWER
3	SCAN
4	SCN-5V
6	Y-DCDC

[12] QSI (INPUT SIGNAL DATA)

The command QSI is for acquiring all data on input video signals.

Command Format	Effective Operation Modes	Function	Remarks
[QSI]	Every Time	Output of status	Return data: 3 (ECO) + 66 (DATA) + 2 (CS) = 71 Byte

	Data Arrangement	Data Length	Output Example
ECO		3 Byte	QSI
1	Type of drive sequence (Note)	4 Byte	60VS
2	Type of ABL adjustment table (Note)	1 Byte	1
3	Type of WB adjustment table (Note)	1 Byte	1
4	Reserved	4 Byte	****
5	Total value of PRH	4 Byte	0256
6	Total value of PGH	4 Byte	0256
7	Total value of PBH	4 Byte	0256
8	Reserved	4 Byte	****
9	Total value of PRL	4 Byte	0512
10	Total value of PGL	4 Byte	0512
11	Total value of PBL	4 Byte	0512
12	Total value of ABL	3 Byte	128
13	V frequency distinction	4 Byte	6002
14	Reserved	4 Byte	****
15	APL acquiring data	4 Byte	1023
16	Number of SUS pulses	4 Byte	0457
17	Detection status of still picture	1 Byte	1
18	Detection status of cracking in the panel	1 Byte	1
19	Detection status of SCAN protection	1 Byte	1
20	Detection status of external protection	1 Byte	1
21	Transition of protection operations	1 Byte	0
22	Address emergency status	1 Byte	1
23	Detection status of reset operation	1 Byte	1
24	In-phase SUS mode status	1 Byte	1
25	Reserved	1 Byte	1
CS	2 Byte	2 Byte	27

Note: The types of drive sequence and ABL/WB table are output as the same data as QPW.

18 to 20: Each protection function

0	Setting: OFF
1	Setting: ON (during wait)
2	Setting: ON (during operation)

21: Transition of protection operations

0	Upper limit status for brightness
1	Brightness being reduced
2	Lower limit status for brightness
3	Brightness being increased

22: Address emergency status

0	Normal status
1	Emergency status

23: Reset operation status

A	All reset operation
2	Interlace 1/2 reset operation
4	Interlace 1/4 reset operation
L	Reset less operation (specifications operation)

24: In-phase SUS mode status

0	Normal status
1	In-phase SUS mode status
2	Assist status at the cancellation

[13] DRV (PANEL DRIVE-POWER ON/OFF)

Panel drive-power ON/OFF (drive ON/OFF) is controllable.

Command Format	Operation		Remarks
	Effective Operation Modes	Function	
[DRV+S00]	Every time	DRIVE OFF	If a command is issued in Standby mode, and the unit is left unoperated for more than 10 seconds, the command will become void.
[DRV+S01]	Every time	DRIVE ON (default)	

Note: The function of the DRIVE OFF key on the remote control unit for servicing is the same as that of the DRVS00 command.
(A function equivalent to that of the DRVS01 command is not provided for the remote control unit for servicing.)

[14] FAY/FAN (ADJUSTMENT COMMANDS PERMISSION/PROHIBITION)

The commands FAY/FAN are for prohibiting/permitting panel/MTB-adjustment commands.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAY]	Normal operation mode while the power is on	Adjustment command is valid.	For details, refer to the section "6.1 [3] FUNCTIONS WHEN ENTERING THE SERVICE FACTORY MODE" of the Service Manual for Media Receiver (KRP-M01).
[FAN]	During FAY	Adjustment command is invalid.	

[15] FAJ/UAJ/CBU/BCP (BACKUP FUNCTION FOR ADJUSTMENT VALUE)

When the DIGITAL Assy is to be replaced, adjustment values can be copied from the backup EEPROM to the EEPROM of the Assy for service.

Command Format	Operation		Remarks
	Effective Operation Modes	Control	
[FAJ]	During FAY	To make the status of the EEPROM on the DIGITAL Assy "adjustment completed" and copy the data to the EEPROM for backup	This takes at least 350 msec.
[UAJ]		To make the status of the EEPROM on the DIGITAL Assy "adjustment not completed"	Only the status is changed, and the real data are not erased.
[CBU]		To make the status of the EEPROM on for backup "adjustment not completed"	Only the status is changed, and the real data are not erased. However, if the status of the EEPROM on the DIGITAL Assy is "adjustment completed," the data in the EEPROM of the DIGITAL Assy will be copied to the EEPROM for backup upon POF.
[BCP]		To copy the backup data from the EEPROM for backup to the EEPROM on the DIGITAL Assy	

[16] QSB

Data on models and versions of the Module microcomputer and Panel Main microcomputer can be acquired.

Command Format	Effective status	Function	Remarks
[QSB]	Every time	To acquire versions of various programs managed by the Panel Main and Module microcomputers	Return data: 3 (ECO) + 87 (DATA) + 2 (CS) = 92 Byte

Data Arrangement			Data Length	Output Example	Remarks
ECO	Echo back		3	"QSB"	
1	Data managed by the Module microcomputer	Display data 1 (resolution, size)	1	F	See QS1.
2		Display data 2 (generation)	1	9	See QS1.
3		Display data 3 (destination)	1	*	See QS1.
4		Display data 4 (grade)	1	*	See QS1.
5		Display data 5 (product style)	1	A	See QS1.
6		Boot version of the Module microcomputer	3	01A	See QS1.
7		Program version of the Module microcomputer (common program of the MD microcomputer)	8	001A ' ' ' '	See QS1.
8		Boot version of the later ASIC (SQ_LSI Boot)	3	01H	See QS1.
9		Program version of the later ASIC (common program of the SQ_LSI)	8	001Y ' ' ' '	See QS1.
10		PANEL INFO	8	G9_50F_2	See QS1.
11		Reserved	8		(All digits are padded with asterisks.)
12	Data managed by the Panel Main microcomputer	Delimiter	1	","	
13		Dummy	4	"****"	
14		Version data of the Panel Main microcomputer	3	– 01	Version of the program
			1	A	A (fixed)
			1	S	S (fixed)
			3	Space	Reserved for the version of the program
			1	Space	Reserved for the version of the boot program
			3	07A	Version of the boot program
15		Model data (Bezel color data, etc.)	1	1	1: R1 (ROM Table 1, 2: R2 (ROM Table 2), 3: R3 (ROM Table 3), E: EP (For use by engineers)
16		Firmware version data of the Displayport_Rx	16	1.10	Version of the program
17		Firmware version data of the Displayport_Rx	4	0C15	Version of hardware
18		Reserved	6		"Space"
CS	Check sum		2	(CS)	

[17] QPB (Panel Main Operation Information)

Data on operation of the display main unit can be acquired.

Command Format	Effective status	Function	Remarks
[QPB]	Every time	To acquire data on current statuses managed by the Panel Main microcomputer	Return data: 3 (ECO) + 53 (DATA) + 2 (CS) = 58 Byte

Data Arrangement		Data Length	Output Example	Remarks
ECO	Echo back	3	"QPB"	
1	Data on panel temperature	5	*****	Temperature of the panel (in Centigrade) (Tmd)
2	Delimiter	1	","	Comma
3	Unit temperature data 1	5	*****	Temperature inside the unit (in Centigrade) (T1)
4	Delimiter	1	","	Comma

6	Delimiter	1	","	Comma
7	Unit temperature data 3 (reserved)	5	*****	Temperature inside the unit (in Centigrade) (T3) (Reserved, All digits are padded with asterisks.)
8	Delimiter	1	","	Comma
9	Fan rotation speed A	1	A	Fan setting A (S: stop, L: Low, H: High, and A: Auto)
10	Fan control A/D value (A)	3	***	Fan control D/A value, A, decimal code
11	Fan rotation speed B	1	A	Fan setting B (S: stop, L: Low, H: High, and A: Auto)
12	Fan control A/D value (B)	3	***	Fan control D/A value, B, decimal code
13	Room Light Sensor level	1	5	0-7, padded with an asterisk during the sensor is off
14	Room Light Sensor A/D value	4	****	Brightness sensor A/D value, decimal code
15	Dummy 1	2	**	All digits are padded with asterisks.
16	System Operation mode of the panel	1	S	S: System Operation mode, T: Standalone Operation mode
17	Dummy 2	2	**	All digits are padded with asterisks.
18	Audio muting	1	0	0: Canceling muting, 1: Muting
19	Reserved	10	**	All digits are padded with asterisks.
CS	Check sum	2	(CS)	

KRP-600P

[18] QAL (Shutdown information for the display main unit)

Up to the 8 latest shutdown logs of the display main unit can be acquired.

Command Format	Effective status	Function	Remarks
[QAL]	Every time	To acquire up to the 8 latest shutdown logs managed by the Panel Main microcomputer	Return data: 3 (ECO) + 96 (DATA) + 2 (CS) = 101 Byte

Data Arrangement		Data Length	Output Example	Remarks
ECO	Echo back	3	"QAL"	
1	Data on the latest shutdown	12		
2	Data on the 2nd latest shutdown	12		
3	Data on the 3rd latest shutdown	12		Reasons of the latest 8 shutdowns and hour-meter data when the shutdowns were generated (For details, see the tables below.)
4	Data on the 4th latest shutdown	12		
5	Data on the 5th latest shutdown	12		
6	Data on the 6th latest shutdown	12		
7	Data on the 7th latest shutdown	12		
8	Data on the 8th latest shutdown	12		
CS	Check sum	2	(CS)	

■ Shutdown (SD) data

Order	Content	Length (BYTE)	Value	Remarks
1	SD category data	1		SD category (For details, see the table below.) 0 for no SD
2	SD subcategory data	1		SD subcategory (For details, see the table below.)
3	HOUR METER	7		Time when a shutdown managed by the Panel Main microcomputer was generated All digits are padded with asterisks when there was no SD.
4	Dummy	3		All digits are padded with asterisks.

■ SD categories/SD subcategories

SD category (response)	Reason for SD	w/wo subcategory	SD subcategory (response)	Reason for subcategory
"0"	No SD (no abnormality)	Without subcategory	"0"	
"5"	Shutdown signal from D-Amp. Short-circuit of speaker terminal.	With subcategory	"1"	A_NG_B : L
			"2"	OTW : L
"6"	Failure in module microcomputer communication	Without subcategory	"0"	
"8"	Failure in IIC communication	With subcategory	"1"	Displayport receiver
			"2"	Failure in AUDIO PWM IC communication
"A"	FAN stop	With subcategory	"1"	FAN_A stop
			"2"	FAN_B stop
"B"	Abnormal temperature of the display unit (high)	With subcategory	"1"	High temperature at Temperature Sensor 1
			"2"	High temperature at Temperature Sensor 2
"D"	Abnormality in power of the Display MAIN Assy	With subcategory	"1"	Abnormality in 6.5V power supply.

6. SERVICE FACTORY MODE
6.1 DETAILS OF THE FACTORY MENU

The Factory menu will be displayed only when the Media Receiver is connected. For details on how to enter Factory menu, refer to "6.1 DETAILS OF THE FACTORY MENU" in the service manual for the Media Receiver.

[1] PANEL FACT.

■ Operation Items

This is the menu screen for the adjustment of the panel. Data acquisition and value adjustment can be performed for the following items:

No.	Indication	Description of functions
[1-1]	PANEL INFORMATION	Data, such as the version of the microcomputer of the panel, product serial number, and statuses of EEPROM for adjustment values for the main unit and for backup, are displayed.
[1-2]	PANEL WORKS	Operation data, such as accumulated pulse-meter count, accumulated hour-meter count, accumulated power-on count, and the temperature detected by the sensor, are displayed.
[1-3]	POWER DOWN	The power-down history is displayed.
[1-4]	SHUT DOWN	The shutdown history of the panel section is displayed.
[1-5]	PANEL-1 ADJ (+)	Settings of the driving voltage and AM radio prevention can be performed.
[1-6]	PANEL-2 ADJ (+)	White balance and ABL (power consumption) for the panel can be set.
[1-7]	PANEL FUNCTION (+)	Setting of the panel-degradation correction-level and various functions are displayed.
[1-8]	ETC. (+)	Copying of backup data, clearing of various settings, and changing of settings for functions for which setting data are not stored upon last update are performed.
[1-9]	RASTER MASK SETUP (+)	The mask indication (RASTER) can be set and indicated.
[1-10]	PATTERN MASK SETUP (+)	The mask indication (PATTERN) can be set and indicated.
[1-11]	COMBI MASK SETUP (+)	The mask indication (COMBI) can be set and indicated.

KRP-600P

■ Details of indications in each layer

[1-1] PANEL INFORMATION

- Data, such as the version of the microcomputer of the panel, product serial number, and statuses of digital EEPROM for storing the adjustment values and for backup EEPROM, are displayed. No other layers are nested below this layer, and there are no adjustment items.

```

■ Key operation

<DOWN> : Shifting to POWER DOWN
<UP>   : Shifting to PANEL INFORMATION
<L/R>   : Updating displayed information

← Temperature unit is " °C (Centigrade) ".

■ Contents of the Display item

- PM-B1 to B5: The accumulated pulse-meter counts for the 5 blocks on the screen are indicated. (the lowest-order digit represents millions of pulses.)
- HR-MTR: The hour-meter value (accumulated power-on hours) is indicated.
- P-COUNT: The accumulated power-on count is indicated.
- TEMP1: The current panel temperature and the historical maximum temperature recorded in memory are indicated. The temperature unit is " °C (Centigrade) ".
- CLS-RGB: Data obtained from the color sensor are displayed in the order R, G, and B, with the status indication at the end.

CLS Status	OSD Indication
Function OFF	-OFF
Color sensor module non connection	-NC
Data abnormality	-INV
Data normal	-OK

Note:
Neither the color sensor value nor the status indication will be displayed if the color sensor function is set to ON in the ETC (+) layer beforehand.

■ Key operation

<DOWN>	: Shifting to SHUT DOWN
<UP>	: Shifting to PANEL WORKS
<L/R>	: Updating displayed information

■ Contents of the Display item

- The last most 8 power-down histories are displayed with the hour-meter values that indicate the hours when power-downs occurred.
- When power-down is confirmed, the factor is displayed as "1st", "2nd", according to the accuracy order.
- The power-down history is not recorded when the power-down occurred at the same place and same time.

<Causes of power-down and corresponding OSD indications>

Cause of power-down	OSD Indication	Cause of power-down	OSD Indication
POWER SUPPLY Unit	P-PWR	ADDRESS Assy	ADRS
SCAN Assy	SCAN	DC/DC converter for X drive	X-DCDC
5 V power for SCAN	SCN5V	X-SUS	X-SUS
DC/DC converter for Y drive	Y-DCDC	DIG-DCDC	D-DCDC
Y-SUS	Y-SUS	Unknown	UNKNOW

[1-4] SHUT DOWN

• The shutdown history of panel section is displayed. No other layers are nested below this layer, and there are no adjustment items.

■ Key operation

<DOWN> : Shifting to PANEL-1 ADJ (+)
<UP>   : Shifting to POWER DOWN
<L/R>   : Updating displayed information

■ Contents of the Display item

• The shutdown history is displayed. The last most 8 shutdown histories are displayed with the hour-meter values that indicate the hours when shutdowns occurred.
• When there is detail information when shutdown occurred, the possible defective part is displayed as Sub information.
• The shutdown history is not recorded when the shutdown occurred at the same place and same time.

<Cause of shutdown and corresponding OSD Indication >

Cause of shutdown (MAIN)		Cause of shutdown (SUB)	
Main cause	OSD Indication	Sub cause	OSD Indication
SQ_LSI	SQ_LSI	Communication Error	RTRY
		Drive Stop	SQNO
		Busy	BUSY
		Version mismatching (H/S)	VER-HS
		Version mismatching (H/M)	VER-HM
		Version mismatching (H/I)	VER-HI
MDU-DEVICE	MD-DEV	Digital EEPROM	EEPROM
		Backup EEPROM	BACKUP
		DAC IC	DAC
Abnormally in RST2 power supply	RST2	–	–
Abnormally in panel temperature	TMP-NG	High temperature of the panel	TMP-H
		Low temperature of the panel	TMP-L

[1-5] PANEL-1 ADJ (+)

This is a page for settings for the driving voltage and AM radio countermeasures. Pressing the ENTER/SET key shifts the screen to the next nested layer below for item selection.
On third line of the screen, the white balance, ABL table, and drive sequence in the current status are displayed.
(Items that have lower layers are the same.)

[2] PANEL MAIN FACT.

■ Operation Items in the PANEL MAIN FACT. Menu

On the PANEL MAIN FACT. menu screen, acquisition of information on and settings for the display main unit can be performed, as shown in the table below:

No.	Indication	Description of functions
[2-1]	VERSION (3)	To indicate the versions of the microcomputers for the display (incl. those for the display main unit)
[2-2]	PM NG INFO.	To indicate the shutdown history of the display main unit
[2-3]	PM STATE INFO.	To indicate temperatures of the display main unit, state of the fans, brightness, and model information
[2-4]	DP_RX INFO.	Data on the DP receiver
[2-5]	PM_SETUP (+)	To clear the history and perform function settings whose data are not retained after the unit is turned off
[2-6]	PM_BEZEL_SETUP	To perform the bezel setup
[2-7]	PM_NG_CLEAR	To clear the shutdown history

■ Description of Indications on Each Layer

[2-1] VERSION (3)

The versions of the microcomputers for the display (incl. those for the display main unit) are indicated on the VERSION (3) screen. No other layers are nested below this layer, and there are no adjustment items.

Although the description on the VERSION (3) screen is included in the PANEL MAIN FACT. section, this screen actually belongs to the INFORMATION layer.

■ Contents of the Display item

- P MAIN: Version of the writing data for the Panel Main microcomputer
- MODULE: Version of the writing data for the Module microcomputer
- SEQ PRS: Version of the writing data for the sequence LSI
- DP RX: Version of the writing data for the DP receiver firmware
- DP RX HARD: Version of the hardware for the DP receiver
- PANEL INFO: Information on the display panel

KRP-600P

[2-2] PANEL MAIN NG INFORMATION

The shutdown history of the display main unit is indicated on the PM NG INFO. screen.
No other layers are nested below this layer.

 16 │                                    │
```

■ **Key operation**

    <DOWN> : Shifting to the next item
    <UP>   : Shifting to the previous item
    <RIGHT> : Changing the setting value upward (+)
    <LEFT>   : Changing the setting value upward (-)
    <ENTER/SET> : Determining the changed value
                         and return to the layer above

Select the bezel setup setting, using the L or R key, then press the SET key to determine the setting.
When NO OPT is selected, bezel setup is not performed.

Each time the L or R key is pressed, setup settings are changed, as shown below:
    R1 ↔ R2 ↔ R3 ↔ EP ↔ NO OPT

"NO OPT" is selected immediately after the PANEL MAIN BEZEL SETUP screen is displayed.

R1: The bezel setup is performed according to ROM table 01. (Default)
R2: The bezel setup is performed according to ROM table 02.
R3: The bezel setup is performed according to ROM table 03.
EP: The bezel setup is performed according to the EEPROM table. (For use by engineers)
NO OPT: Bezel setup is not performed.

[2-7] PANEL MAIN NG CLEAR

The shutdown logs can be cleared on the PM NG CLEAR screen.

```
     1    5    10    15    20    25    30  32
  1 │PM  FACTORY        IN1-30101-NTV-JHB│

■ Notes on Removing the POWER SUPPLY Unit

1. Construction of the POWER SUPPLY Unit
The POWER SUPPLY Unit comprises two boards, which must be replaced at the same time.
(These boards are delivered as a set if ordered.)
POWER SUPPLY Unit

2. Discharge of residual electric charge
Immediately after the power cord is unplugged, residual electric charge remains for about 3-5 minutes in the capacitor inside the POWER SUPPLY Unit.
Before removing the POWER SUPPLY Unit, make sure that residual electric charge has fallen to a safe level.

How to discharge residual electric charge rapidly
Discharge residual electric charge by connecting two 220 Ω (10 W) forced discharging resistors (440 Ω in total,) one to each end, of C121.

<How to remove the POWER SUPPLY Unit>
① Make sure that the power cord is unplugged. Check the voltage of both ends of C121 on the PKG2, using a tester.
② Wait until the voltage at both ends of C121 has fallen to 5 V or less.
③ When the voltage becomes less than 5 V, disconnect the connectors of the POWER SUPPLY Unit then remove it.
Points of checking residual electric charge:
After making sure that the voltage of both ends of C121 has fallen to 5 V or less, disconnect the PFC connector.

8. EACH SETTING AND ADJUSTMENT
1. At shipment, the unit is adjusted to its best conditions. Normally, it is not necessary to readjust even if an assembly is replaced. If the adjustment is shifted or if it becomes necessary to readjust because of part replacement, etc., perform the adjustment as described below.
2. Any value changed in Service/Factory mode will be stored in memory as soon as it is changed. Before readjustment, take note of the original values for reference in case you need to restore the original settings.
3. Use a stable AC power supply.

8.1 ADJUSTMENT REQUIRED WHEN THE UNIT IS REPAIRED OR REPLACED

■ When any of the following assemblies is replaced

POWER SUPPLY Unit	➡ Refer to "8.3 HOW TO CLEAR HISTORY DATA" .
DIGITAL Assy	➡ Writing of backup data is required. Refer to the "8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)".
X DRIVE Assy	➡ No adjustment required
Y DRIVE Assy	➡ No adjustment required
Service Panel Assy	➡ Refer to "8.3 HOW TO CLEAR HISTORY DATA" and "8.4 ADJUSTMENTS WHEN THE SERVICE PANEL ASSY IS REPLACED".
MAIN Assy (Note)	➡ No adjustment required
AUDIO Assy	➡ No adjustment required
SENSOR Assy	➡ Writing of backup data is required. Refer to the "8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)".
Other assemblies	➡ No adjustment required

Note: After replacing the MAIN Assy, be sure to perform the FINAL SETUP.
To perform the FINAL SETUP for the display main unit and module via the RS-232C connector on the display, set the unit to Standalone Operation mode, by issuing the SYSS00 command, then issue the FAY command then FSP command. (Common to models of any size and for any destination)
To perform the FINAL SETUP of the entire system, i.e., the display and the Media Receiver (MR), input commands via the RS-232C connector on the MR in System Operation mode.
For details, refer to the service manual of the Media Receiver.

KRP-600P

■ When any of the following parts is replaced

Notes on replacing parts

For the parts described in the list below, replacement is required for the whole Assy, not only the defective part.
If any part listed below is identified as defective and needs replacement, replace the whole Assy, and make necessary adjustments after replacement.

PCB Assy No.	Assy Name	Parts that Require Whole-Assy Replacement		
		Ref No.	Function Name	Part No.
AWV2538	DIGITAL Assy	IC3302	Flash ROM	AGC1069
		IC3601	Flash UCOM	AGC1068
AWV2597	X DRIVE Assy	• Parts of X D-D CON BLOCK		
AWV2598	Y DRIVE Assy	• Parts of Y VF D-D CON BLOCK 1 • Parts of Y MAIN D-D CON BLOCK 1 • Parts of Y MAIN D-D CON BLOCK 2		
AWW1393	MAIN Assy	IC5001	Display port Rx IC	GM68020H-CG-K
		IC5003	EEPROM	S25FL016A0LMF013
		IC5005	EEPROM	M2404HEPROM
		IC7001	Flash UCOM	MB91F356B-G-SPE1-K
		IC7003	EEPROM	BR24L02FJ-W

Reason: The whole Assy must be replaced, because adjustments and data rewriting for the Assy at the level of production line are required.

For the parts described in the table below, replacement of individual parts is difficult, because a heat pad is provided under the bottom of the ICs.

PCB Assy No.	Assy Name	Parts that Replacement is Possible		
		Ref No.	Function Name	Part No.
AWW1393	MAIN Assy	IC4501	Regulator IC	NJM2871BF05
		IC4503	Regulator IC	PQ025ENA1ZPH
		IC4504	Regulator IC	NJM2846DL3-18
		IC7004	Regulator IC	NJM2846DL3-33
AWW1398	AUDIO Assy	IC8331	Regulator IC	NJM2846DL3-33
		IC8401	Digital Amp	TAS5122DCA
AWW1394	FAN Assy	IC1201	Regulator IC	PQ200WNA1ZPH
		IC1202	Regulator IC	PQ200WNA1ZPH

POWER SUPPLY Unit ➡ The assembly must be replaced as a unit, and no part replacement is allowed.

MAIN Assy ➡ No adjustment required

AUDIO Assy ➡ No adjustment required

DIGITAL Assy ➡ No adjustment required

X DRIVE Assy ➡ No adjustment is required after replacement of parts other than those shown in "8.5 ADJUSTMENT WHEN THE DRIVE ASSYS ARE REPLACED.

Y DRIVE Assy ➡ No adjustment is required after replacement of parts other than those shown in "8.5 ADJUSTMENT WHEN THE DRIVE ASSYS ARE REPLACED.

ADDRESS Assy ➡ No adjustment required

SENSOR Assy ➡ No adjustment required

Other assemblies ➡ No adjustment required

8.2 BACKUP OF THE EEPROM (DIGITAL ASSY)

■ Outline

Adjustment data are stored in the EEPROM on the DIGITAL Assy in the production process. Those adjustment data are also automatically stored in the EEPROM (for backup) on the SENSOR Assy.
If the DIGITAL Assy is replaced, those adjustment data for backup can be copied from the EEPROM on the SENSOR Assy to a new DIGITAL Assy.

■ Backed up data

• Drive voltage adjustment value
• Panel white balance adjustment value
• Drive waveform adjustment value
• Hour-meter count

• Pulse-meter count
• P-ON counter value
• Serial No.
• PD/SD histories

■ How to copy backup data

1. When the DIGITAL Assy is replaced with one for service (usual service)

Immediately after the DIGITAL Assy is replaced, the EEPROM on the DIGITAL Assy is in the status "adjustment not completed," and the EEPROM for backup on the SENSOR Assy is in the status "adjustment completed." The LED on the main unit warns you that the adjustment data in the EEPROM for backup have not been copied to the EEPROM on the DIGITAL Assy, by lighting the red LED and flashing the blue LED. In such a case, the adjustment data for backup can be used by copying the data to the EEPROM on the DIGITAL Assy, with the following procedures:

(1) Copying, using the Factory menu
① Turn on the power.
② Enter the Panel Factory mode.
③ Display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP" and "ADJUSTED" is set for "BACKUP".
④ Copy the backup data, as shown in the figure below.

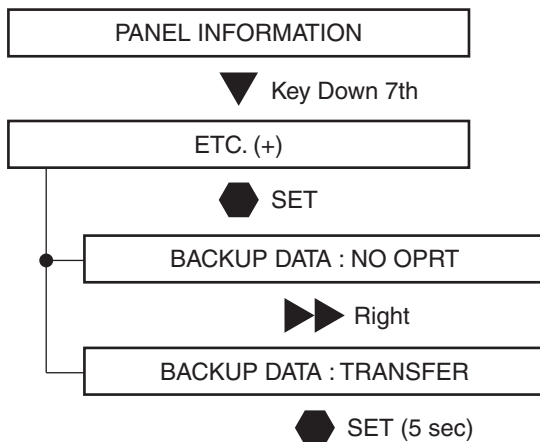

```
        ┌─────────────────────────────┐
        │   PANEL INFORMATION         │
        └─────────────────────────────┘
                    ▼  Key Down 7th
        ┌─────────────────────────────┐
        │   ETC. (+)                  │
        └─────────────────────────────┘
                    ⬡  SET
        ┌─────────────────────────────┐
        │   BACKUP DATA : NO OPRT     │
        └─────────────────────────────┘
                    ▶▶  Right
        ┌─────────────────────────────┐
        │   BACKUP DATA : TRANSFER    │
        └─────────────────────────────┘
                    ⬡  SET (5 sec)
```

⑤ Check if "ADJUSTED" is set for "DIG. EEP" on the PANEL INFORMATION page.
⑥ Turn off the power.

(2) Copying, using the RS-232C commands
① Turn on the power.
② Issue the FAY command.
③ With the QS2 command, confirm that the main unit adjustment flag is "adjustment not completed" and that the adjustment backup flag is "adjustment completed."
④ Issue the BCP command to transfer the data stored in the EEPROM for backup.
⑤ With the QS2 command, confirm that the main unit adjustment flag becomes "adjustment completed."
⑥ Turn off the power.

Note: If both the DIGITAL and SENSOR Assys are to be replaced, replace the SENSOR Assy first in order to store the backup data. Then turn the unit on then back off again, then replace the DIGITAL Assy.

A

2. When manual adjustment is required after the DIGITAL Assy is replaced with one for service

If backup data cannot be transferred to the DIGITAL Assy because of defective parts, etc., after the DIGITAL Assy is replaced and manual adjustment is performed, those manually adjusted data can be registered as adjusted data with the following procedures. Once the data on the DIGITAL Assy are registered as adjusted data, the adjustment data for backup will be automatically updated each time the unit is turned off. Therefore, if a DIGITAL Assy with adjusted data is mounted on the unit, the following procedures are not required, even after manual adjustment.

(1) Copying, using the Factory menu

B
① Turn on the power.
② Enter the Panel Factory mode.
③ Display the PANEL INFORMATION page, then check if "NO DATA!" is set for "DIG. EEP".
④ Register the changed adjustment data as adjusted data, as described for the following procedures, then transfer them as backup data.

```
┌─────────────────────────────┐
│      PANEL INFORMATION       │
└─────────────────────────────┘
              ▼  Key Down 7th
┌─────────────────────────────┐
│          ETC. (+)            │
└─────────────────────────────┘
```

C
```
              ⬢  SET
┌─────────────────────────────┐
│    BACKUP DATA : NO OPRT     │
└─────────────────────────────┘
              ▼  Key Down
┌─────────────────────────────┐
│   DIGITAL EEPROM : NO OPRT   │
└─────────────────────────────┘
              ▶▶ Right
┌─────────────────────────────┐
│   DIGITAL EEPROM : REPAIR    │
└─────────────────────────────┘
```

D
```
              ⬢  SET (5 sec)
```

⑤ Check if "ADJUSTED" is set for "DIG. EEP" on the PANEL INFORMATION page.
⑥ Turn off the power.

(2) Copying, using the RS-232C commands

① Turn on the power.
② Issue the FAY command.
③ With the QS2 command, confirm that the main unit adjustment flag is "adjustment not completed."
④ Issue the FAJ command to register the changed adjustment data as adjusted data then transfer them as backup data.
⑤ With the QS2 command, confirm that the main unit adjustment flag becomes "adjustment completed."
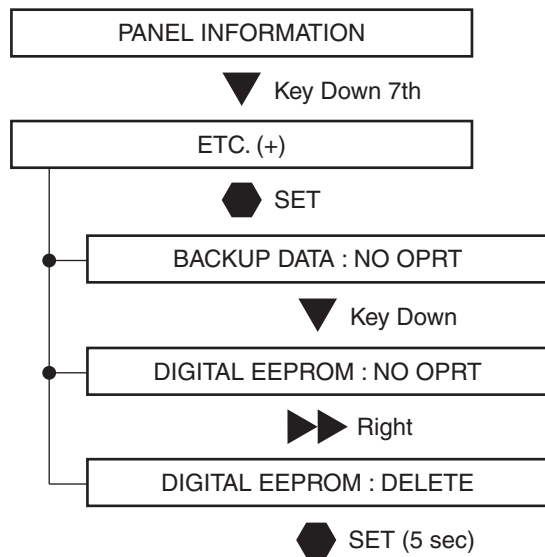

E
⑥ Turn off the power.

F

3. When a secondhand DIGITAL Assy is to be reused

A DIGITAL Assy in good condition that had been mounted in another product can be reused. Before reuse, by following the procedures described below, make the data in the EEPROM on the DIGITAL Assy "adjustment not completed" data in order to prevent accidental updating of backup data when the secondhand DIGITAL Assy is mounted in another product

(1) Copying, using the Factory menu
① Turn on the power.
② Enter the Panel Factory mode.
③ Display the PANEL INFORMATION page, then check if "ADJUSTED" is set for "DIG. EEP".
④ Make the data in the EEPROM on the DIGITAL Assy "adjustment not completed" data, by following the procedures below:

```
┌──────────────────────────────┐
│     PANEL INFORMATION        │
└──────────────────────────────┘
            ▼  Key Down 7th
┌──────────────────────────────┐
│         ETC. (+)             │
└──────────────────────────────┘
            ⬡  SET
┌──────────────────────────────┐
│   BACKUP DATA : NO OPRT      │
└──────────────────────────────┘
            ▼  Key Down
┌──────────────────────────────┐
│   DIGITAL EEPROM : NO OPRT   │
└──────────────────────────────┘
            ▶▶  Right
┌──────────────────────────────┐
│   DIGITAL EEPROM : DELETE    │
└──────────────────────────────┘
            ⬡  SET (5 sec)
```

⑤ Check if "NO DATA!" is set for "DIG. EEP" on the PANEL INFORMATION page.
⑥ Turn off the power.

(2) Copying, using the RS-232C commands
① Turn on the power.
② Issue the FAY command.
③ With the QS2 command, confirm that the main unit adjustment flag is "adjustment completed."
④ Issue the UAJ command to make the data in the EEPROM on the DIGITAL Assy "adjustment not completed" data.
⑤ With the QS2 command, confirm that the main unit adjustment flag becomes "adjustment not completed."
⑥ Turn off the power.

Note: If you mount a secondhand Assy to the product without performing the above procedures, the adjustment data and logs for the main unit specific to the product will be erased, and those of the secondhand Assy will be copied when the unit is turned off.

8.3 HOW TO CLEAR HISTORY DATA

■ Clearance of various logs after the Assys are replaced

Besides adjustment data, data on accumulated power-on time and logs on defective parts of the product are backed up.
Some of those data must be cleared after the Assys are replaced for service.
Clearance of those data can be performed in the ETC layer of the Factory menu or with RS232C commands.

| Item	Content	Clearing at the Replacement			Clearing method	
		Panel	POWER SUPPLY Unit	Other parts	Factory Menu (ETC layer)	RS-232C Commands
Hour-meter	Accumulated power-on time	Must be cleared	No need to be cleared	No need to be cleared	HR-MTR INFO.	CHM
Pulse-meter	Accumulated number of pulses emitted	Must be cleared (mandatory)	No need to be cleared	No need to be cleared	PM/B1-B5	CPM
Shutdown history of the panel	Causes and hour-meter values for the last eight shutdowns (SD) of the Panel	Must be cleared	No need to be cleared	No need to be cleared	SD INFO.	CSD
Power-down history	Causes and hour-meter values for the last eight power-downs (PDs) of the Panel	Must be cleared	No need to be cleared	No need to be cleared	PD INFO.	CPD
Power-on counter	Relay-on count	No need to be cleared	Must be cleared (mandatory)	No need to be cleared	P COUNT INFO.	CPC
MAX TEMP	Historical max. temperature of the panel	Must be cleared	Must be cleared	Must be cleared	MAX TEMP.	CMT

Notes: • As the pulse-meter count is used for each correction function, the log must be cleared when the panel is replaced.
• After you clear the log, the unit must be turned off then back on again to reflect the cleared data for each correction function. If any adjustment is required after clearing the log, be sure to turn the unit off then back on again before adjustment.

(1) Clearance of logs, using the Factory menu
① Turn on the power.
② Enter the Panel Factory mode.
③ Clear the various logs, as shown in the figure below.

Note: The following example shows how to clear the PD log (PD INFO.). To clear other items, select each item you wish to clear then perform the same procedures.

```
PANEL INFORMATION
       ▼ Key Down 7th
ETC. (+)
       ⬢ SET
    BACKUP DATA : NO OPRT
           ▼ Key Down
    BACKUP DATA : NO OPRT
           ▼ Key Down
    DIGITAL EEPROM : NO OPRT
           ▼ Key Down
    PD INFO. < = > : NO OPRT   ▶▶ Right   PD INFO. < = > : CLEAR   ⬢ SET (5 sec)
```

④ Turn off the power.

(2) Using the RS-232C commands
① Turn on the power.
② Issue the FAY command.
③ Issue the Delete command for a log you wish to clear.
④ Turn off the power.

8.4 ADJUSTMENT WHEN THE SERVICE PANEL ASSY IS REPLACED

After the panel is replaced with one for service, voltage margin adjustment is required.

[Preparation]

Basically, voltage margin adjustment is performed using the Panel Factory menu.
After the panel is replaced and the unit is turned on, clear the pulse meter first.
For details on how to clear the pulse meter, see "8.3 HOW TO CLEAR HISTORY DATA".

∗1: As various corrections are made referring to the pulse-meter count to calculate how long the panel has been used, if adjustment of the panel for service is performed without clearing the pulse-meter count, proper adjustments will not be performed.
∗2: The drive sequence for Video 60-Hz is used for adjustment. When adjustment is made using the Panel Factory menu, the current drive sequence is displayed on the screen, as shown in the figure below. Make sure that 60VS is always indicated during adjustment.
∗3: Selct the input function excepting PC.

Example of the On-Screen display during Panel Factory mode

[Supplement]

In the "PANEL-1ADJ" layer, the Panel White Balance value is reset to default, Panel Gamma is set to Straight, Noise is set to OFF, LUT mode is set to ON and Reset active control is set to OFF.
If adjustment is performed using RS232C commands, unlike the case of Factory menu operation, adjustments are not interlocked. Therefore, settings must be performed individually, by issuing commands. (See the section on preparations before adjustment.)

■ Interlocked settings for Voltages Vyknofs1/3/4

For the 9th-generation PDPs, interlocked setting for Voltages Vyknofs1/3/4 is available on the Factory menu or with RS232C commands, for easier adjustment. Therefore, in the adjustment flowchart, the interlocked setting function is used. (Individual setting for each adjustment value is also possible, as in the conventional setting methods.

| Set Voltage	Factory Menu	Command
Vyknofs1 individual	VOL YNOFS1 D	[V1F]
Vyknofs3 individual	VOL YNOFS3 D	[V3F]
Vyknofs4 individual	VOL YNOFS4 D	[V4F]
Vyknofs1,3,4 interlocked	VOL YNOFSA D	[VYF]

Note:
• The initial value for the interlocked setting value is 128, including for factory preset values.
• See "[3] DRIVE ASSY" of "5.2 DIAGNOSIS FLOWCHART OF FAILURE ANALYSIS" for calculation of actually used voltage values.
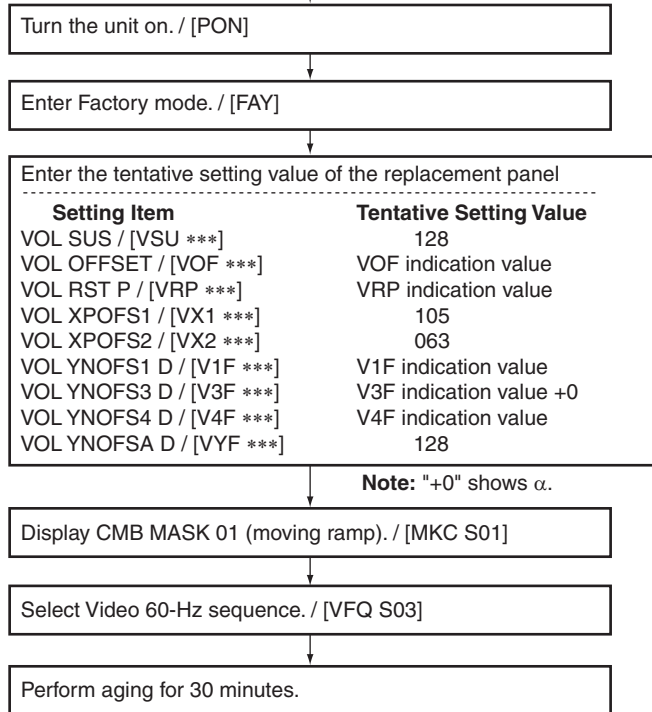

KRP-600P

■ Preparation before adjustment

[Replacement with the panel for service is completed.]

Procedures for resetting corrections for change over time

| Turn the unit on. / [PON] |

| Enter Factory mode. / [FAY] |

| Set PM/B1-B5 to CLEAR (to clear the pulse meter). / [CPM] |

| Set HR-MTR to CLEAR (to clear the hour meter). / [CHM] |

| Turn the unit off. / [POF] |

∗ To reflect the results of log clearing for each correction function, the unit must be turned off then back on again. Before adjustment, be sure to turn the unit off then back on again.

Procedures for stabilizing the panel before adjustment

| Turn the unit on. / [PON] |

| Enter Factory mode. / [FAY] |

Enter the tentative setting value of the replacement panel

Setting Item	Tentative Setting Value
VOL SUS / [VSU ∗∗∗]	128

Gradually increase the VOL YNOFSA D value until disappear the discharge (dead cell).
The tentative setting value of VOL YNOFS1 D + current setting value of VOL YNOFSA D must be 205 or less.

Tentative setting value of VOL YNOFS1 D + current setting value of VOL YNOFSA D > 203? — Yes → **Replacement of abnormal circuits or re-replacement of the panel required**

No

Display RST MASK 23 (Magenta 169). / [MKR S23]

Set VOL YNOFSA D to the current setting value plus 44. / [VYF ∗∗∗]

Is there erroneous discharge (abnormal lit cell)? (Check on the PANEL 1-ADJ menu.) — Yes → **Replacement of abnormal circuits or re-replacement of the panel required**

No

Set VOL YNOFSA D to the current setting value minus 13. / [VYF ∗∗∗]

Determine the current VOL YNOFSA D setting value as the final value.

[To the Main flowchart (2)]

■ Recovery flowchart (2-3)...Changing the VOL YNOFSA D setting

[From the Main flowchart (2)]

RST MASK 23 (Magenta 169)

Gradually decrease the VOL YNOFSA D value until disappear the discharge (lit cell).
The tentative setting value of VOL YNOFS1 D + current setting value of VOL YNOFSA D must be 192 or greater.

Tentative setting value of VOL YNOFS1 D + current setting value of VOL YNOFSA D < 194? — Yes → **Replacement of abnormal circuits or re-replacement of the panel required**

No

Display RST MASK 19 (Green 718+). / [MKR S19]

Set VOL YNOFSA D to the current setting value minus 44. / [VYF ∗∗∗]

Is there erroneous discharge (abnormal dead cell)? (Check on the PANEL 1-ADJ menu.) — Yes → **Replacement of abnormal circuits or re-replacement of the panel required**

No

Display RST MASK 18 (Red 626+). / [MKR S18]

Is there erroneous discharge (abnormal dead cell)? (Check on the PANEL 1-ADJ menu.) — Yes → **Replacement of abnormal circuits or re-replacement of the panel required**

No

Set VOL YNOFSA D to the current setting value plus 32. / [VYF ∗∗∗]

Determine the current VOL YNOFSA D setting value as the final value.

[To the Main flowchart (2)]

KRP-600P

8.5 ADJUSTMENT WHEN THE DRIVE ASSYS ARE REPLACED

■ **Waveform adjustments required when replacing the following parts of the X DRIVE and Y DRIVE Assys.**

Assy Name	Ref No.	Part Name	Part Category	Remarks
X DRIVE Assy	IC1101	PS9818-1(P)	Photo Coupler	
	IC1104	TND307TD	FET Driver	
	IC1204	PS9818-2(P)	Photo Coupler	
	IC1209	TND307TD	FET Driver	
Y DRIVE Assy	IC2101	PS9818-1(P)	Photo Coupler	
	IC2103	TND307TD	FET Driver	
	IC2201	PS9818-1(P)	Photo Coupler	
	IC2203	TND307TD	FET Driver	

■ TIME LAG ADJUSTMENT OF THE CONTROL SIGNAL (SUS-B)

① Measure the time lag for the SUS-U signal to the SUS-B signal.
② Check the time lag for the SUS-B Gate signal to the SUS-U Gate siganl.
   Adjust the variable control so that the time lag of Gate becomes " time lag of input signal $+ \alpha \pm 5$ nsec."
Note: • Be sure to set the Drive to OFF for adjustment.
          • For details on measuring points of waveform, see the figure below.

SUS-U signal (input to the DRIVE Assy) —— 50 % of the crest value

SUS-B signal (input to the DRIVE Assy) —— 50 % of the crest value

time lag of SUS-U and SUS-B
Δ Tsus-iub

SUS-U signal
X DRIVE (Gate terminal of Q1108)
Y DRIVE (Gate terminal of Q2107) —— 5 V position

SUS-B signal
X DRIVE (Gate terminal of Q1219)
Y DRIVE (Gate terminal of Q2218) —— 5 V position

time lag of SUS-U Gate and SUS-B Gate
Δ Tsus - gub
Time lag of SUS-U Gate and SUS-B Gate : Δ Tsus - gub
Adjust so that "Δ Tsus - gub = Δ Tsus - iub $+ \alpha \pm 5$ nsec," using the variable controls shown in the table below:

Assy	VR	Value of α
X DRIVE Assy	VR1002	60 nsec
Y DRIVE Assy	VR2002	60 nsec

KRP-600P

137

■ DELAY ADJUSTMENT OF THE CONTROL SIGNAL (SUS-D)

① Measure the pulse width of the SUS-D signal.
② Check the pulse width of the SUS-D input signal (gate terminal of Q2111).
   Adjust the variable control so that the pulse width of the SUS-D input signal (gate terminal of Q2111) becomes the same pulse width ± 5 nsec as the SUS-D signal.

Note: • For details on measuring points of waveform, see the figure below.

SUS-D pulse width
Tsus - D

50 % of the crest value   50 % of the crest value

SUS-D signal
(input to the DRIVE Assy)

SUS-D pulse width
Tsus - Dg

50 % of the crest value   50 % of the crest value

SUS-D signal
(input to the gate terminal of Q2111)
SUS-D pulse width: Tsus - Dg
Adjust so that "Tsus - Dg = Tsus - D ± 5 nsec," using the variable control shown in the table below:

Assy	VR
Y DRIVE Assy	VR2001

■ SUS-B ADJUSTMENT

X DRIVE Assy

from DIGITAL Assy

XSUS-U — IC1001_A1 Pin 2 — IC1101 Photo Coupler — IC1104 — Q1104 — TP1119 — Q1108 IGBT / Q1116 IGBT — TP1127

① Measure the SUS-U and SUS-B input delay time (Δ Tsus - iub).

② Adjust the SUS-U and SUS-B input delay time so that it becomes "Δ Tsus - iub + 60 $\pm$ 5 nsec."

from DIGITAL Assy

XSUS-B — IC1001_A1 Pin 2 — VR1002 — IC1204 Photo Coupler — IC1209 — Q1204 TP1246 — Q1218 IGBT — Q1205 TP1236 — Q1219 IGBT — Q1207 TP1238 — Q1221 IGBT

9. EXPLODED VIEWS AND PARTS LIST

NOTES: ● *Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.*
● *The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.*
● *Screws adjacent to ▼ mark on product are used for disassembly.*
● *For the applying amount of lubricants or glue, follow the instructions in this manual. (In the case of no amount instructions, apply as you think it appropriate.)*

■ Disassembly / Reassembly of the Service Panel Assy

The panel for service for the 60-inch integrated-type monitor for overseas is used as the panel for service for the 60-inch 9G monitor. Before it can be used for servicing the 9G monitor, it is necessary to replace some of its parts with those from the chassis of the panel to be repaired.

Disassemble/reassemble the panel for service in the manner shown below.

Procedures for removing unnecessary parts

1 Rear Case Assy 60

① Remove the four screws. (ABA1380)

② Remove the 38 screws. (AMZ30P060FTB)

③ Remove the rear case Assy 60.
Rear case Assy 60

The inner grip Assys do not need to be removed from the rear case Assy 60.

2 Front Bezel (609SERV)

① Remove the five rivets.

② Pull the lower part of the front bezel (609SERV) toward you and out.

③ Remove the front bezel (609SERV), by pulling it upward.

Front bezel (609SERV)
Rivet

Turn it not to press the rivet.
(Because when the rivet presses, fit in once again.)

Front side

KRP-600P
3 Sub Frame Assy

① Remove the four screws. (AMZ30P060FTB)

② Remove the 20 screws. (TBZ40P060FTC)

③ Remove the two sub frame Assys.

Sub frame Assy
4 F. Chassis HT and HB Assys

● F. chassis HT Assy

① Remove the two screws. (ABZ30P080FTC)

② Remove the three screws. (APZ30P080FTB)

③ Remove the two screws. (AMZ30P060FTB)
④ Remove the F. chassis HT Assy.

### ● F. chassis HB Assy

⑤ Remove the two screws. (ABZ30P080FTC)

⑥ Remove the three screws. (APZ30P080FTB)

⑦ Remove the two screws. (AMZ30P060FTB)

⑧ Remove the F. chassis HB Assy.

F. chassis HT Assy ④

F. chassis HB Assy ⑧

KRP-600P
5 F. Chassis VL and VR Assys

● F. chassis VL Assy

① Remove the two screws. (ABZ30P080FTC)

② Remove the one screw. (APZ30P080FTB)

③ Remove the two screws. (AMZ30P060FTB)

④ Remove the F. chassis VL Assy.

F. chassis VL Assy

③

①

②

The inner bezel support do not need to be removed from the F. chassis VL Assy

④

The inner bezel support do not need to be removed from the F. chassis VL Assy

①

③

● F. chassis VR Assy

⑤ Remove the two screws. (ABZ30P080FTC)

⑥ Remove the one screw. (APZ30P080FTB)

⑦ Remove the two screws. (AMZ30P060FTB)

⑧ Remove the F. chassis VR Assy.

F. chassis VR Assy

⑦

⑤

The inner bezel support do not need to be removed from the F. chassis VR Assy

⑧

⑥

The inner bezel support do not need to be removed from the F. chassis VR Assy

⑦

⑤

6 Support Bracket

① Remove the two screws. (ABA1351)

② Remove the two support brackets.

NEVER remove the
Front chassis H guide.

Support bracket

NEVER remove the
Front chassis H guide.

**Procedures for reattaching the parts from this model
(Remove the necessary parts from the panel being repaired then reattach them to the panel for service.)**

1 Support Bracket V and Corner Spacer

① Tighten the two screws, and attatch the two support brackets V. (ABA1351)

② Tighten the two screws, and attatch the two corner spacer. (ABA1351)

Screw on the support brackets after inserting the positioning guide pin to the hole of the P. chassis.

Support bracket V

Support bracket V

Screw on the corner spacers after positioning them at each corner metal fitting of the P. chassis.

Corner spacer

Corner spacer

2 F. Chassis HT Assy (60M) and F. Chassis HB (60M)

● **F. chassis HT Assy (60M)**

① Tighten the two screws. (ABZ30P080FTC)

② Tighten the three screws. (APZ30P080FTB)

①-2

②

①-1

F. chassis HT Assy (60M)
F. chassis HB (60M)

● **F. chassis HB (60M)**

③ Tighten the two screws. (ABZ30P080FTC)

④ Tighten the three screws. (APZ30P080FTB)

③-2
